Tocomwall	Sarah Franks	5.4.14	Registered interest in the project	E-mail	Alan Williams
DCAC	Leanne Watson	9.4.14	Registered interest in the project	E-mail	Alan Williams
Gunjeewong Cultural Heritage Aboriginal Corporation	Cherie Carroll Turise	22.4.14	Registered interest in the project, and indicated that she grew up in Vineyard, and had extensive knowledge of the contemporary history of the region.	Letter	Alan Williams
-	Phil Khan	23.4.14	Registered interest in the project	Phone	Alan Williams
-	Tony Williams	24.4.14	Registered interest in the project	E-mail	Alan Williams
-	Darren Williams	24.4.14	Registered interest in the project	E-mail	Alan Williams
-	Shane Williams	25.4.14	Registered interest in the project	E-mail	Alan Williams
-	Andrew Williams	25.4.14	Registered interest in the project	E-mail	Alan Williams
All RAPs	-	30.4.14	Distributed an assessment methodology to each RAP for consideration and comment	E-mail/post/fax	Alan Williams
-	Phil Khan	1.5.14	Discussions on insurances and information that had been previously sent to AHMS, but did not appear to	Phone	Alan Williams

Organisation/Group	Representative Contacted	Date	Comments	Communication Type	AHMS Contact
			have been received.		
OEH	Miranda Firman	2.5.14	Provided a letter outlining the list of stakeholders for the project.	E-mail	Alan Williams
DLALC	Steven Randall	2.5.14	Provided a letter outlining the list of stakeholders for the project.	E-mail	Alan Williams
	Tony Williams	3.5.14	Provided a response to AHMS' methodology document	E-mail	Alan Williams
DACHA	Celestine Everingham	7.5.14	Provided a response to AHMS' methodology document	Fax	Alan Williams
	Andrew Williams	11.5.14	Provided a response to AHMS' methodology document	E-mail	Alan Williams
DACHA	Celestine Everingham	28.5.2014	Discussed insurances. Although workers comp is passed expiry, CE followed it up and has been granted a 6 week extension. She will fax it through this week.	Phone	Liz Foley
Williams family	Tony, Andrew, Darren and Shane Williams	28.5.2014	Requested insurances by Thursday COB for rostering	Email	Liz Foley
DCAC	Leanne Watson	28.5.2014	Requested insurances by Thursday COB for rostering	Email	Liz Foley
Gunjeewong	Cherie Turise	28.5.2014	Left message to call back about fieldwork	Phone	Liz Foley
-	Phil Khan	28.5.2014	Called to discuss insurance. No answer	Phone	Liz Foley
-	Phil Khan	28.5.14	Phil rang back, he will fax through insurances in the morning.	Phone	Fenella Atkinson
-	Phil Khan	28.5.14	Phil faxed through insurances.	Fax	Fenella Atkinson
-	Tony Williams	28.5.14	Tony emailed (copying in the other three Williamses) details of policy for public liability insurance for Shane Williams' electrical company.	Email	Fenella Atkinson

Organisation/Group	Representative Contacted	Date	Comments	Communication Type	AHMS Contact
-	Phil Khan	29.5.14	Phil called to check that insurances had come through.	Phone	Fenella Atkinson
DACHA	Celestine Everingham	29.5.14	Celestine faxed Certificate of Currency for Workers Compensation insurance.	Fax	Fenella Atkinson
-	Tony Williams	29.5.14	Fenella responded to Tony (copying in the other three Williamses), requesting Certificates of Currency for Public Liability insurance and Workers Compensation (or equivalent) insurance which are required of sub-contractors by AHMS.	Email	Fenella Atkinson
-	Tony Williams	30.5.14	Tony rang to discuss the project and the consultation process. He is a Darug person and grew up in the area, and has been involved in Aboriginal rights and cultural heritage issues since the 1960s / 1970s. He is concerned about non-Aboriginal people being involved as stakeholders and facilitating the destruction of sites. Fenella asked whether Tony would be interested in talking about the Aboriginal history of the area with AHMS, as an addition to the required consultation process, but Tony pointed out that he had concerns with information entering the public domain and being misused. Fenella outlined insurance requirements for engagement for the fieldwork. Tony will follow up with Shane and get back to us. Tony advised that Darren Williams would not participate in the fieldwork.	Phone	Fenella Atkinson
DCAC	Leanne Watson	28.5.14	Leanne emailed certificates of currency	Email	Liz Foley

Organisation/Group	Representative Contacted	Date	Comments	Communication Type	AHMS Contact
Gunjeewong	Cherie Carroll-Turise	30.5.14	Called Cherie to request insurances, she requested I get in touch with her daughter Julie to organise them. Emailed Julie to request insurances.	Phone/email	Liz Foley
Gunjeewong	Julie Schroder	31.5.14	Julie provided the bill of insurance, not Certificate of Currency	Email	Liz Foley
Gunjeewong	Julie Schroder	2.6.2014	Liz emailed Julie to request certificate of currency for both public liability and workers comp. Julie replied she realised the policy was not current, and is going to chase up her parents to organise renewal, and provide certificates ASAP.	Email	Liz Foley
DACHA	Celestine Everingham	2.6.2014	Called to confirm dates. Faxed through fieldwork info.	Phone/fax	Liz Foley
DLALC	Steve Randall	2.6.2014	Called to confirm dates. Emailed through info. Steve needs to confirm.	Phone/email	Liz Foley
DCAC	Leanne Watson	2.6.2014	Left message for Leanne to contact Liz via mobile about fieldwork.	Phone	Liz Foley
DLO	Gordon Workman	2.6.2014	Called to confirm dates. Emailed through fieldwork info.	Phone/email	Liz Foley

Dear Mr Williams,

Thank you for your letter dated 18/3/2014 to the Office of Environment and Heritage (OEH) regarding obtaining a list of the Aboriginal stakeholders that may have an interest in the assessment at Riverstone East and Vineyard (Blacktown and Hawkesbury LGA).

Before making an application for the issue of an Aboriginal Heritage Impact Permit, the applicant must carry out an Aboriginal community consultation process in accordance with the National Parks and Wildlife Regulation 2009 and completed to the stage described in subclause 80C.

Please find attached the list of Aboriginal stakeholders known to OEH that may have an interest in the project. OEH's list of regional stakeholders is a list of groups, organisations or individuals who may hold cultural knowledge relevant to a proposal in a region. Consultation with Aboriginal people should not be confused with employment. Inclusion on the OEH's list is not an automatic right to employment. It is the decision of a proponent on who they choose to engage to deliver services based on a range of considerations including skills, relevant experience, and WHS considerations. To be clear, the proponent is under no obligation to employ Aboriginal people registered for consultation.

Further, receipt of this information does not remove the requirement of a proponent/consultant to advertise in local print media and contact other bodies seeking interested Aboriginal parties. Consultation with Aboriginal stakeholders must be in accordance with the *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* which can be found on the Office of Environment and Heritage (OEH) public website by accessing the following link:

<http://www.environment.nsw.gov.au/resources/cultureheritage/commconsultation/09781ACHconsultreq.pdf>

If you wish to discuss any of the above matters further please contact Miranda Firman, Aboriginal Heritage Planning Officer, on (02) 9995 5477. Please note our change of postal address.

Yours sincerely

S. Harrison 24/03/14

Dear Mr Williams

Native Title Search Results for Blacktown City Council Local Government Area

Thank you for your search request received on 25 March 2014 in relation to the above area.

Search Results

The results provided are based on the information you supplied and are derived from a search of the following Tribunal databases:

Register Type	NNTT Reference Numbers
Schedule of Applications (unregistered claimant applications)	Nil.
Register of Native Title Claims	Nil.
National Native Title Register	Nil.
Register of Indigenous Land Use Agreements	Nil.
Notified Indigenous Land Use Agreements	Nil.

At the time this search was carried out, there were **no relevant entries** in the above databases.

Please note: There may be a delay between a native title determination application being lodged in the Federal Court and its transfer to the Tribunal. As a result, some native title determination applications recently filed with the Federal Court may not appear on the Tribunal's databases.

Tribunal accepts no liability for reliance placed on enclosed information

The enclosed information has been provided in good faith. Use of this information is at your sole risk. The National Native Title Tribunal makes no representation, either express or implied, as to

the accuracy or suitability of the information enclosed for any particular purpose and accepts no liability for use of the information or reliance placed on it.

If you have any further queries, please feel free to contact me via the details listed below.

Yours sincerely

Searching the NNTT Registers in New South Wales

Search service

On request the National Native Title Tribunal may search its public registers for you. A search may assist you in finding out whether any native title applications (claims), determinations or agreements exist over a particular area of land or water.

In New South Wales native title cannot exist on privately owned land including family homes or farms.

What information can a search provide?

A search can confirm whether any applications, agreements or determinations are registered in a local government area. Relevant information, including register extracts and application summaries, will be provided.

In NSW because we cannot search the registers in relation to individual parcels of land we search by local government area.

Most native title applications do not identify each parcel of land claimed. They have an external boundary and then identify the areas not claimed within the boundary by reference to types of land tenure e.g., freehold, agricultural leasehold, public works.

What if the search shows no current applications?

If there is no application covering the local government area this only indicates that at the time of the search either the Federal Court had not received any claims in relation to the local government area or the Tribunal had not yet been notified of any new native title claims.

It does not mean that native title does not exist in the area.

Native title may exist over an area of land or waters whether or not a claim for native title has been made.

Where the information is found

The information you are seeking is held in three registers and on an applications database.

National Native Title Register

The National Native Title Register contains determinations of native title by the High Court, Federal Court and other courts.

Register of Native Title Claims

The Register of Native Title Claims contains applications for native title that have passed a registration test.

Registered claims attract rights, including the right to negotiate about some types of proposed developments.

Register of Indigenous Land Use Agreements

The Register of Indigenous Land Use Agreements contains agreements made with people who hold or assert native title in an area.

The register identifies development activities that have been agreed by the parties.

Schedule of Native Title Applications

The Schedule of Native Title Applications contains a description of the location, content and status of a native title claim.

This information may be different to the information on the Register of Native Title Claims, e.g., because an amendment has not yet been tested.

How do I request a native title search?

Download the Search Request Form from the Tribunal's website at -

Dear Sir/ Madam

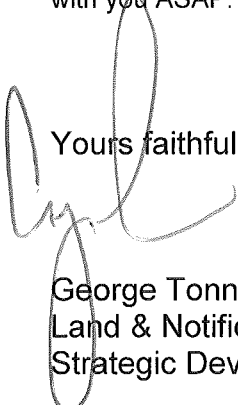

Request for information on Aboriginal Stakeholders for an Aboriginal Cultural
Heritage Assessment at Riverstone East and Vineyard

I refer to your letter on the 18 March 2014 concerning the above.

I advise that NTSCORP's privacy guidelines restrict us from providing proponents with contact details of traditional owners. However, we will forward your correspondence to any individuals, groups and organisations, whom NTSCORP is aware assert traditional interests within, or hold cultural knowledge about the relevant area.

Please be aware that NTSCORP cannot make a guarantee or undertaking that the recipients of our correspondence represent the entirety of traditional owners for the relevant area.

To assist proponents in following the Aboriginal Cultural Heritage Consultation Requirements, recipients of our correspondence will be invited to register their interest in the project directly with you ASAP.

Yours faithfully

George Tonna

WATERLOO NSW 2017

1 April 2014

Dear Alan

Request - Search for Aboriginal Land Claim

I refer to your letter dated 25 March 2014 to search the Register of Aboriginal Land Claims database in relation to land described by you as:

Lot: 1 & 2 DP 1042607

Parish: Gidley

County: Cumberland

I have searched the Register of Aboriginal Land Claims database and the subject land described by you *does not appear* on the Register as being affected by an Aboriginal Land Claim in pursuant to sections 36 or 37 of the *Aboriginal Land Rights Act 1983*.

Regards

Tabatha Dantoine
Administrative Officer

Office of the Registrar, *Aboriginal Land Rights Act 1983 (NSW)*

Please Note: Search Requests should not be made over privately owned land. Crown Land is the only land in NSW that is likely to be affected by an Aboriginal Land Claim under the Aboriginal Land Rights Act. It is not necessary to make a search over privately owned – even if an Aboriginal Land Claim has been made over privately owned land it would be refused as soon as this is known.

Subject: Re: Request for Information on Aboriginal Stakeholders - Riverstone East and Vineyard Growth Centre precincts

Hi Alan

Under the act that we work, I am not allowed to pass on the information that you requested in your letter dated 18 March 2014 Re: **Request for Information on Aboriginal Stakeholders for an Aboriginal Cultural Heritage Assessment at Riverstone East and Vineyard**

The Greater Sydney Local Land Services (former Catchment Management Authority) has no interest in this project, and will pass your letters on to the members of our Advisory Committee for their information. If they comment on this, it is an individual person and not a representative of the Greater Sydney Local Land Services.

Regards

Margaret Bottrell

Dear Margaret,

AHMS is undertaking an Aboriginal Cultural Heritage Assessment of two Northwest Growth Centre precincts, Riverstone East and Vineyard. As part of this assessment, we are required to contact the CMA to identify potential Aboriginal stakeholders in the area, with whom we should consult on the project. Can you please provide such information as soon as possible – I have attached the required search form request.

Best wishes

Al

Riverstone East and Vineyard Precincts. Notification of Aboriginal Cultural Heritage Assessment, Project Information and Invitation to Register an Interest.

«GreetingLine»

In accordance with the NSW Office of Environment and Heritage's (OEH) *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW 2010), I am writing to notify you that we have been engaged by NSW Planning & Infrastructure to undertake an Aboriginal Cultural Heritage Assessment (ACHA) in advance of proposed re-zoning of the Riverstone East and Vineyard Growth Centre Precincts.

The land in question is divided into two study areas:

- Riverstone East Precinct, Blacktown Local Government Area: Riverstone East is some 650 hectares, and is bounded by Schofields Road to the south, Windsor Road to the north east and First Ponds creek to the west (Figure 1);
- Vineyard Precinct, Hawkesbury Local Government Area: Vineyard is some 500 hectares and is bounded by Commercial Road to the north, Boundary Road to the east and Windsor Road to the south (Figure 2).

AHMS will be undertaking the assessment in accordance with the relevant OEH guidelines. An important part of the assessment will be Aboriginal community consultation that aims to identify cultural values and places of importance to the Aboriginal community within the subject area. The purpose of the consultation is to assist the proponent in preparing the ACHA for the study area, and if necessary to assist OEH in considering the assessment and any AHIP application.

This letter has been prepared by Archaeological & Heritage Management Solutions Pty Ltd (AHMS) for the proponent, NSW Planning & Infrastructure. Contact details are provided below in Table 1:

Table 1 - Contact details

NSW Planning & Infrastructure	Archaeological & Heritage Management Solutions Pty Ltd
GPO Box 39	2/729 Elizabeth Street
Sydney, NSW, 2001	Waterloo NSW 2017
Contact Person: Evelyn Ivinson	Contact Person: Alan Williams
T. (02) 9860 1525	T. 02 9555 4000
E: evelyn.ivinson@planning.nsw.gov.au	F. 02 9555 7005
	E: awilliams@ahms.com.au

We are inviting registrations from Aboriginal individuals and/or organisations, who may hold cultural knowledge for the area relevant to determining the significance of Aboriginal objects and/or places and who wish to be involved in the community consultation process. If you or your organisation are interested in being part of the consultation process, please provide registration of interest to Alan Williams (details listed above in Table 1).

Registrations are requested by **18 April 2014**.

To assist us with communicating project information effectively could you please include the following information in your registration of interest:

1. A clear identification of the organisation registering an interest in the project;
2. Your preferred method of communication with AHMS and the proponent during consultation for this project, including a nominated contact person and contact details;
3. Comment on the level of consultation/project involvement you require (Do you wish to attend any meetings? Do you wish to be involved in any fieldwork? Do you simply want a copy of the final report?);
4. If you wish to be involved in any meetings or fieldwork, please ensure we have current copies of your public liability, workers compensation and professional indemnity (if available) insurances as soon as possible.

As part of the consultation process we are obliged to provide the contact details of organisations and individuals who register an interest to the Office of Environment and Heritage and the Local Aboriginal Land Council, unless instructed otherwise. Please advise us if you do not wish this to occur.

Please be aware that AHMS does not make determinations about who may be engaged to take part in fieldwork and that registration of interest will not necessarily lead to participation in fieldwork. OEH guidelines require that such decisions are made by the proponent. If you wish to be involved in any fieldwork, please provide information on hourly and/or daily rates and current copies of your public liability, workers compensation and professional indemnity (if available) insurances as soon as possible. It would also be useful to provide further information on proposed individual staff and an assurance of their:

1. Endorsement by a relevant portion of Aboriginal community with whom they are able to confer regarding the outcome of the work and cultural significance;
2. Ability and willingness to provide input that can be incorporated into written assessment of cultural values within the subject area;
3. Demonstrated experience in archaeological survey and/or excavation and that they are fit for work that involves physical labour.

Following the registration process, Registered Aboriginal Parties will be sent a draft assessment methodology for review, including information on any proposed survey/test excavation within the subject

area and the stages of consultation process in which it will be possible to provide input (e.g. document review, meetings, etc).

Please don't hesitate to contact me on (02) 9555 4000 if you have any queries or concerns.

Yours sincerely,

A handwritten signature in blue ink, appearing to read 'Alan Williams', is positioned above the typed name.

Subject: Riverstone East and Vineyard Precincts. Notification of Aboriginal Cultural Heritage Assessment, Registration of interest.

Dear Alan,

Our group is a non-profit organisation that has been active for over forty years in Western Sydney, we are a Darug community group with over three hundred members. The main aim in our constitution is the care of Darug sites, places, wildlife and to promote our culture and provide education on the Darug history.

The Riverstone East and Vineyard precinct are areas that our group has a vast knowledge of, we have worked and lived in for many years, this area is significant to the Darug people due to the connection of sites and the continued occupation. Our group has been involved in all previous assessments and works in this area as a traditional owner Darug group for the past 40 plus years.

Therefore we would like to register our interest for full consultation and involvement in these two study areas.

Please contact us with all further enquiries on the above contacts.

Regards

Riverstone East and Vineyard Precincts: Project Information and Proposed Aboriginal Cultural Heritage Assessment Methodology

Dear Scott,

Thank you for your registration of interest in the Aboriginal Cultural Heritage Assessment for the Riverstone East and Vineyard Growth Centre Precincts (**Figure 1**). Your interest in the project has been formally registered in accordance with the *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010*.

The subject areas comprise:

- Riverstone East Precinct, Blacktown Local Government Area: Riverstone East is some 650 hectares, and is bounded by Schofields Road to the south, Windsor Road to the north east and First Ponds creek to the west;
- Vineyard Precinct, Hawkesbury Local Government Area: Vineyard is some 500 hectares and is bounded by Commercial Road to the north, Boundary Road to the east and Windsor Road to the south.

AHMS understands that the Department of Planning & Environment proposes to re-zone the areas, and that the results of the ACHA will assist with the precinct planning process.

Enclosed is the proposed methodology for the Aboriginal Cultural Heritage Assessment which includes an archaeological survey. I would like to invite you to review the methodology and provide comment. Can you please provide any comments you may have by **(28 May 2014)**.

Thanks again for registering your interest and participation in this project. I look forward to receiving your response to the proposed methodology. If you have any questions, please do not hesitate to contact me on (02) 9555 4000.

Yours sincerely,

Alan Williams MAACAI

Manager NSW - Aboriginal Heritage

Contact Details

This letter has been prepared by Archaeological & Heritage Management Solutions Pty Ltd (AHMS) for the proponent, Department of Planning & Environment:

Table 1 - Contact Details

Proponent	Archaeological Advisor
NSW Planning & Infrastructure	Archaeological & Heritage Management Solutions Pty Ltd
GPO Box 39	2/729 Elizabeth Street
Sydney, NSW, 2001	Waterloo NSW 2017
Contact Person: Evelyn Ivinson	Contact Person: Alan Williams
T. (02) 9860 1525	T. 02 9555 4000
	F. 02 9555 7005
E: evelyn.ivanon@planning.nsw.gov.au	E: awilliams@ahms.com.au

Background

The subject area comprises the Vineyard and Riverstone East Precincts. AHMS understands that the Department of Planning & Environment proposes to re-zone the subject area to allow for future urban development. THE ACHA will assist in this process by identifying archaeologically and culturally sensitive areas within the growth precincts.

AHMS will be undertaking the assessment in accordance with the relevant OEH (now part of NSW Department of Planning and Environment) guidelines. An important part of the assessment will be Aboriginal community consultation that aims to identify cultural values and places of importance to the Aboriginal community within the subject area.

A review of the AHIMS database has indicated that there are:

- 4 registered sites within the Vineyard Precinct;
- 9 registered sites within the Riverstone East Precinct.

As the proposed works may have the potential to impact on Aboriginal cultural heritage in the future, the Department of Planning & Environment have engaged AHMS, to undertake an Aboriginal Cultural Heritage Assessment (ACHA) of the study area in accordance with OEH guidelines. The ACHA will assess the potential impact of any proposed future development, and will provide the necessary documentation to apply for an Aboriginal Heritage Impact Permit (AHIP), or Permits, should one be required.

Proposed Assessment Methodology

AHMS proposes to develop an ACHA in accordance with the latest OEH guidelines for the proposed development, being:

- *Guide to Investigating, Assessing and Reporting on Aboriginal Cultural Heritage in NSW* (OEH 2011);
- *Code of Practice for Archaeological Investigation of Aboriginal Objects in New South Wales* (DECCW 2010); and
- *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW 2010).

Development of the ACHA will include the following tasks:

- Aboriginal community consultation;
- Archaeological survey (further detail is provided below). This component would be undertaken in conjunction with representatives of the Registered Aboriginal Parties (RAPs) based on selective commercial engagements determined by the client;
- Preparation of the ACHA, which incorporates Aboriginal consultation and any cultural information provided, outlines the findings of the archaeological survey, assesses potential impacts to Aboriginal heritage, and makes recommendations on any Aboriginal heritage sites and/or objects that may be present within the proposed subject area;
- If required, prepare an application for an Aboriginal Heritage Impact Permit (AHIP) or Permits to allow the proposed activity and/or additional mitigation measures to be conducted;
- If sites are identified, submit Site Cards and Site Impact Recording Forms to OEH; and
- If required, develop a Care and Control agreement for recovered artefacts and/or submit a site update card to OEH upon reburial of artefacts.

Archaeological Survey Methodology

We propose to undertake an archaeological survey of the subject area utilising a stratified sampling methodology. Methods will follow the *Code of Practice for Archaeological Investigation of Aboriginal Objects in NSW (2010)* and aim to identify any visible Aboriginal objects (material traces and evidence of Aboriginal land); as well as identify those areas where it can be inferred that, although not visible, material traces or evidence of Aboriginal land use have a likelihood of being present under the ground surface (potential archaeological deposits).

The survey strategy will utilise the following requirements of the Code and include:

1. Inspection of a sample of the landforms that will potentially be impacted;
2. Place a proportional emphasis on those landforms deemed to have archaeological potential;
3. Re-inspection of the GPS location of any previously recorded Aboriginal sites, in order to provide information on their current extent and significance;
4. Pedestrian survey of pre-determined transects;
5. Taking representative photographs of survey units and landforms where informative;

6. Recording landform and general soil information for each survey unit;
7. Recording the land surface and vegetation conditions encountered during the survey, accounting as appropriate for things like vegetation, rock outcrops, coarse fragments, etc.) and how these impact on the visibility of objects;
8. Recording any Aboriginal objects observed during the survey; and
9. Recording of spatial information suitable for mapping according to Code requirements and the calculation of survey coverage.

The archaeological survey is designed to sample the precincts in a systematic manner by targeting areas of ground surface visibility and including a representative sample of all landforms. Any areas of ground exposure will be examined for archaeological evidence such as stone artefacts, charcoal and shell. Ground surfaces and cut and fill features will also be examined to determine the degree of soil disturbance, erosion and potential for subsurface archaeological deposits.

The Archaeological survey will involve a five stage approach:

Stage 1 – In conjunction with the proponent, AHMS will seek contact with the landowners to arrange a date for the archaeological survey of each property to be conducted. AHMS will also seek advice from the landowners on access issues and discuss any stipulated requirements.

Stage 2 - An analysis of topographic maps and aerial photographs will be undertaken prior to the survey to identify landforms across the subject area and to identify areas of ground surface exposure in the form of tracks, unsealed roads, dams, cuttings and areas of ground exposure. Those properties that meet these requirements will then be targeted during the survey because they provide an opportunity to identify surface artefact scatters and to investigate exposed soil profiles. Properties that have been subject to extensive ground disturbance will be neglected in favour of undisturbed properties with high ground surface visibility in order to maximise the chance of identifying surface sites and potential archaeological deposits. The properties selected for survey will also reflect the range of landforms present within the subject areas.

Stage 3 - The first step when entering each property is to familiarize ourselves with the landscape and target areas of ground surface visibility.

Stage 4 - Following the initial scoping work, ground inspection will be conducted on foot in survey transects. Areas of ground surface visibility will be surveyed in their entirety. We propose to traverse approximately 70km in survey transects across both precincts.

Stage 5 – Any surface artefact scatters found during the survey will be recorded in detail using a pro-forma developed for field recording. The location and extent of each surface site would be recorded with a GPS. Field notes will be made and photographs taken to document landscape configuration, soil profiles, soil disturbance, ground visibility and vegetation types. Previously recorded sites will also be assessed in order to provide information on their current extent and significance.

The *OEH Due Diligence Code of Practice for the Protection of Aboriginal Objects* in New South Wales requires that when a desktop assessment and archaeological survey confirm the presence or likelihood of Aboriginal objects that will be harmed by a proposed development, further investigation is required.

However, if the results of the desktop research and archaeological survey indicate that there is a low likelihood for sub-surface Aboriginal objects with potential conservation value to be present within the study area and high levels of past disturbance have most likely removed or disturbed any Aboriginal sites or objects, then further archaeological investigation (in the form

of sub-surface testing) should not be considered warranted prior to the proponent undertaking an Aboriginal Heritage Impact Permit (AHIP).

Aboriginal Consultation

AHMS has recently begun the formal consultation process in accordance with OEH's *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW, 2010). The project currently has the following Registered Aboriginal Parties (RAPs):

- Deerubbin LALC;
- Darug Aboriginal Cultural Heritage Assessments;
- Darug Custodian Aboriginal Corporation;
- Darug Land Observations;
- Tocomwall;
- Phil Kahn;
- Tony Williams;
- Shane Williams;
- Darren Williams; and
- Andrew Williams.

Please note that unless otherwise advised, we are required to send details of all RAPs to OEH and Local Aboriginal Land Council as part of the consultation procedure.

Timeframes

AHMS proposes the following indicative timeframes for the project:

- Distribution of this document to the RAPs: 1 May 2014.
- End of review period for the proposed methodology: 28 May 2014.
- Field Survey: eight days to be undertaken in early June 2014.
- Review period of draft report: early July 2014.

Information Sought

AHMS would appreciate your review of the above methodology proposed for the investigation and assessment of the project.

In returning your answers, please include the following where appropriate:

- Any protocols that you would like adopted during the project;

ARCHAEOLOGICAL & HERITAGE MANAGEMENT SOLUTIONS

- Identification of any Aboriginal objects of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Identification of any places of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Guidance on the protocols, sensitivity, use and/or distribution of any cultural information that you provide AHMS;
- Whether you require any further information prior to AHMS proceeding with the project; and
- Any initial thoughts on the potential long term storage and/or management of the Aboriginal objects that may be recovered from the test excavations if they ensue.

Please ensure AHMS is also provided with your nominated individual's contact information including phone number, fax number, postal address and e-mail address (if available).

If you wish to be considered for participation in any fieldwork, please also provide information on the following:

- Current certificates of currency for relevant insurances;
- Information on hourly or daily rates;
- Information that may demonstrate experience in archaeological survey/excavation;
- An assurance that any proposed staff are 'fit for work' to undertake the physical labour of archaeological survey/excavation.
- An assurance that any proposed site staff are endorsed by a relevant section of the Aboriginal community and are able to confer and/or report back to them on project outcomes.

We also direct you to AHMS' policy and procedures on Aboriginal engagement, which will be provided with this document.

It is important that you understand that AHMS will compile and forward information for review by the proponent, but we do not decide who will be involved in any paid capacity.

If you like to arrange for any elders or other community members to be able to visit the site during the work, please let us know.

Riverstone East and Vineyard Precincts: Project Information and Proposed Aboriginal Cultural Heritage Assessment Methodology

Dear Gordon,

Thank you for your registration of interest in the Aboriginal Cultural Heritage Assessment for the Riverstone East and Vineyard Growth Centre Precincts (**Figure 1**). Your interest in the project has been formally registered in accordance with the *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010*.

The subject areas comprise:

- Riverstone East Precinct, Blacktown Local Government Area: Riverstone East is some 650 hectares, and is bounded by Schofields Road to the south, Windsor Road to the north east and First Ponds creek to the west;
- Vineyard Precinct, Hawkesbury Local Government Area: Vineyard is some 500 hectares and is bounded by Commercial Road to the north, Boundary Road to the east and Windsor Road to the south.

AHMS understands that the Department of Planning & Environment proposes to re-zone the areas, and that the results of the ACHA will assist with the precinct planning process.

Enclosed is the proposed methodology for the Aboriginal Cultural Heritage Assessment which includes an archaeological survey. I would like to invite you to review the methodology and provide comment. Can you please provide any comments you may have by **(28 May 2014)**.

Thanks again for registering your interest and participation in this project. I look forward to receiving your response to the proposed methodology. If you have any questions, please do not hesitate to contact me on (02) 9555 4000.

Yours sincerely,

Alan Williams MAACAI

Manager NSW - Aboriginal Heritage

Background

The subject area comprises the Vineyard and Riverstone East Precincts. AHMS understands that the Department of Planning & Environment proposes to re-zone the subject area to allow for future urban development. THE ACHA will assist in this process by identifying archaeologically and culturally sensitive areas within the growth precincts.

AHMS will be undertaking the assessment in accordance with the relevant OEH (now part of NSW Department of Planning and Environment) guidelines. An important part of the assessment will be Aboriginal community consultation that aims to identify cultural values and places of importance to the Aboriginal community within the subject area.

A review of the AHIMS database has indicated that there are:

- 4 registered sites within the Vineyard Precinct;
- 9 registered sites within the Riverstone East Precinct.

As the proposed works may have the potential to impact on Aboriginal cultural heritage in the future, the Department of Planning & Environment have engaged AHMS, to undertake an Aboriginal Cultural Heritage Assessment (ACHA) of the study area in accordance with OEH guidelines. The ACHA will assess the potential impact of any proposed future development, and will provide the necessary documentation to apply for an Aboriginal Heritage Impact Permit (AHIP), or Permits, should one be required.

Proposed Assessment Methodology

AHMS proposes to develop an ACHA in accordance with the latest OEH guidelines for the proposed development, being:

- *Guide to Investigating, Assessing and Reporting on Aboriginal Cultural Heritage in NSW* (OEH 2011);
- *Code of Practice for Archaeological Investigation of Aboriginal Objects in New South Wales* (DECCW 2010); and
- *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW 2010).

Development of the ACHA will include the following tasks:

- Aboriginal community consultation;
- Archaeological survey (further detail is provided below). This component would be undertaken in conjunction with representatives of the Registered Aboriginal Parties (RAPs) based on selective commercial engagements determined by the client;
- Preparation of the ACHA, which incorporates Aboriginal consultation and any cultural information provided, outlines the findings of the archaeological survey, assesses potential impacts to Aboriginal heritage, and makes recommendations on any Aboriginal heritage sites and/or objects that may be present within the proposed subject area;
- If required, prepare an application for an Aboriginal Heritage Impact Permit (AHIP) or Permits to allow the proposed activity and/or additional mitigation measures to be conducted;
- If sites are identified, submit Site Cards and Site Impact Recording Forms to OEH; and
- If required, develop a Care and Control agreement for recovered artefacts and/or submit a site update card to OEH upon reburial of artefacts.

Archaeological Survey Methodology

We propose to undertake an archaeological survey of the subject area utilising a stratified sampling methodology. Methods will follow the *Code of Practice for Archaeological Investigation of Aboriginal Objects in NSW (2010)* and aim to identify any visible Aboriginal objects (material traces and evidence of Aboriginal land); as well as identify those areas where it can be inferred that, although not visible, material traces or evidence of Aboriginal land use have a likelihood of being present under the ground surface (potential archaeological deposits).

The survey strategy will utilise the following requirements of the Code and include:

1. Inspection of a sample of the landforms that will potentially be impacted;
2. Place a proportional emphasis on those landforms deemed to have archaeological potential;
3. Re-inspection of the GPS location of any previously recorded Aboriginal sites, in order to provide information on their current extent and significance;
4. Pedestrian survey of pre-determined transects;
5. Taking representative photographs of survey units and landforms where informative;

6. Recording landform and general soil information for each survey unit;
7. Recording the land surface and vegetation conditions encountered during the survey, accounting as appropriate for things like vegetation, rock outcrops, coarse fragments, etc.) and how these impact on the visibility of objects;
8. Recording any Aboriginal objects observed during the survey; and
9. Recording of spatial information suitable for mapping according to Code requirements and the calculation of survey coverage.

The archaeological survey is designed to sample the precincts in a systematic manner by targeting areas of ground surface visibility and including a representative sample of all landforms. Any areas of ground exposure will be examined for archaeological evidence such as stone artefacts, charcoal and shell. Ground surfaces and cut and fill features will also be examined to determine the degree of soil disturbance, erosion and potential for subsurface archaeological deposits.

The Archaeological survey will involve a five stage approach:

Stage 1 – In conjunction with the proponent, AHMS will seek contact with the landowners to arrange a date for the archaeological survey of each property to be conducted. AHMS will also seek advice from the landowners on access issues and discuss any stipulated requirements.

Stage 2 - An analysis of topographic maps and aerial photographs will be undertaken prior to the survey to identify landforms across the subject area and to identify areas of ground surface exposure in the form of tracks, unsealed roads, dams, cuttings and areas of ground exposure. Those properties that meet these requirements will then be targeted during the survey because they provide an opportunity to identify surface artefact scatters and to investigate exposed soil profiles. Properties that have been subject to extensive ground disturbance will be neglected in favour of undisturbed properties with high ground surface visibility in order to maximise the chance of identifying surface sites and potential archaeological deposits. The properties selected for survey will also reflect the range of landforms present within the subject areas.

Stage 3 - The first step when entering each property is to familiarize ourselves with the landscape and target areas of ground surface visibility.

Stage 4 - Following the initial scoping work, ground inspection will be conducted on foot in survey transects. Areas of ground surface visibility will be surveyed in their entirety. We propose to traverse approximately 70km in survey transects across both precincts.

Stage 5 – Any surface artefact scatters found during the survey will be recorded in detail using a pro-forma developed for field recording. The location and extent of each surface site would be recorded with a GPS. Field notes will be made and photographs taken to document landscape configuration, soil profiles, soil disturbance, ground visibility and vegetation types. Previously recorded sites will also be assessed in order to provide information on their current extent and significance.

The *OEH Due Diligence Code of Practice for the Protection of Aboriginal Objects* in New South Wales requires that when a desktop assessment and archaeological survey confirm the presence or likelihood of Aboriginal objects that will be harmed by a proposed development, further investigation is required.

However, if the results of the desktop research and archaeological survey indicate that there is a low likelihood for sub-surface Aboriginal objects with potential conservation value to be present within the study area and high levels of past disturbance have most likely removed or disturbed any Aboriginal sites or objects, then further archaeological investigation (in the form

of sub-surface testing) should not be considered warranted prior to the proponent undertaking an Aboriginal Heritage Impact Permit (AHIP).

Aboriginal Consultation

AHMS has recently begun the formal consultation process in accordance with OEH's *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW, 2010). The project currently has the following Registered Aboriginal Parties (RAPs):

- Deerubbin LALC;
- Darug Aboriginal Cultural Heritage Assessments;
- Darug Custodian Aboriginal Corporation;
- Darug Land Observations;
- Tocomwall;
- Phil Kahn;
- Tony Williams;
- Shane Williams;
- Darren Williams; and
- Andrew Williams.

Please note that unless otherwise advised, we are required to send details of all RAPs to OEH and Local Aboriginal Land Council as part of the consultation procedure.

Timeframes

AHMS proposes the following indicative timeframes for the project:

- Distribution of this document to the RAPs: 1 May 2014.
- End of review period for the proposed methodology: 28 May 2014.
- Field Survey: eight days to be undertaken in early June 2014.
- Review period of draft report: early July 2014.

Information Sought

AHMS would appreciate your review of the above methodology proposed for the investigation and assessment of the project.

In returning your answers, please include the following where appropriate:

- Any protocols that you would like adopted during the project;

ARCHAEOLOGICAL & HERITAGE MANAGEMENT SOLUTIONS

- Identification of any Aboriginal objects of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Identification of any places of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Guidance on the protocols, sensitivity, use and/or distribution of any cultural information that you provide AHMS;
- Whether you require any further information prior to AHMS proceeding with the project; and
- Any initial thoughts on the potential long term storage and/or management of the Aboriginal objects that may be recovered from the test excavations if they ensue.

Please ensure AHMS is also provided with your nominated individual's contact information including phone number, fax number, postal address and e-mail address (if available).

If you wish to be considered for participation in any fieldwork, please also provide information on the following:

- Current certificates of currency for relevant insurances;
- Information on hourly or daily rates;
- Information that may demonstrate experience in archaeological survey/excavation;
- An assurance that any proposed staff are 'fit for work' to undertake the physical labour of archaeological survey/excavation.
- An assurance that any proposed site staff are endorsed by a relevant section of the Aboriginal community and are able to confer and/or report back to them on project outcomes.

We also direct you to AHMS' policy and procedures on Aboriginal engagement, which will be provided with this document.

It is important that you understand that AHMS will compile and forward information for review by the proponent, but we do not decide who will be involved in any paid capacity.

If you like to arrange for any elders or other community members to be able to visit the site during the work, please let us know.

Riverstone East and Vineyard Precincts: Project Information and Proposed Aboriginal Cultural Heritage Assessment Methodology

Dear Gordon,

Thank you for your registration of interest in the Aboriginal Cultural Heritage Assessment for the Riverstone East and Vineyard Growth Centre Precincts (**Figure 1**). Your interest in the project has been formally registered in accordance with the *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010*.

The subject areas comprise:

- Riverstone East Precinct, Blacktown Local Government Area: Riverstone East is some 650 hectares, and is bounded by Schofields Road to the south, Windsor Road to the north east and First Ponds creek to the west;
- Vineyard Precinct, Hawkesbury Local Government Area: Vineyard is some 500 hectares and is bounded by Commercial Road to the north, Boundary Road to the east and Windsor Road to the south.

AHMS understands that the Department of Planning & Environment proposes to re-zone the areas, and that the results of the ACHA will assist with the precinct planning process.

Enclosed is the proposed methodology for the Aboriginal Cultural Heritage Assessment which includes an archaeological survey. I would like to invite you to review the methodology and provide comment. Can you please provide any comments you may have by **(28 May 2014)**.

Thanks again for registering your interest and participation in this project. I look forward to receiving your response to the proposed methodology. If you have any questions, please do not hesitate to contact me on (02) 9555 4000.

Yours sincerely,

Alan Williams MAACAI

Manager NSW - Aboriginal Heritage

Contact Details

This letter has been prepared by Archaeological & Heritage Management Solutions Pty Ltd (AHMS) for the proponent, Department of Planning & Environment:

Background

The subject area comprises the Vineyard and Riverstone East Precincts. AHMS understands that the Department of Planning & Environment proposes to re-zone the subject area to allow for future urban development. THE ACHA will assist in this process by identifying archaeologically and culturally sensitive areas within the growth precincts.

AHMS will be undertaking the assessment in accordance with the relevant OEH (now part of NSW Department of Planning and Environment) guidelines. An important part of the assessment will be Aboriginal community consultation that aims to identify cultural values and places of importance to the Aboriginal community within the subject area.

A review of the AHIMS database has indicated that there are:

- 4 registered sites within the Vineyard Precinct;
- 9 registered sites within the Riverstone East Precinct.

As the proposed works may have the potential to impact on Aboriginal cultural heritage in the future, the Department of Planning & Environment have engaged AHMS, to undertake an Aboriginal Cultural Heritage Assessment (ACHA) of the study area in accordance with OEH guidelines. The ACHA will assess the potential impact of any proposed future development, and will provide the necessary documentation to apply for an Aboriginal Heritage Impact Permit (AHIP), or Permits, should one be required.

Proposed Assessment Methodology

AHMS proposes to develop an ACHA in accordance with the latest OEH guidelines for the proposed development, being:

- *Guide to Investigating, Assessing and Reporting on Aboriginal Cultural Heritage in NSW* (OEH 2011);
- *Code of Practice for Archaeological Investigation of Aboriginal Objects in New South Wales* (DECCW 2010); and
- *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW 2010).

Development of the ACHA will include the following tasks:

- Aboriginal community consultation;
- Archaeological survey (further detail is provided below). This component would be undertaken in conjunction with representatives of the Registered Aboriginal Parties (RAPs) based on selective commercial engagements determined by the client;
- Preparation of the ACHA, which incorporates Aboriginal consultation and any cultural information provided, outlines the findings of the archaeological survey, assesses potential impacts to Aboriginal heritage, and makes recommendations on any Aboriginal heritage sites and/or objects that may be present within the proposed subject area;
- If required, prepare an application for an Aboriginal Heritage Impact Permit (AHIP) or Permits to allow the proposed activity and/or additional mitigation measures to be conducted;
- If sites are identified, submit Site Cards and Site Impact Recording Forms to OEH; and
- If required, develop a Care and Control agreement for recovered artefacts and/or submit a site update card to OEH upon reburial of artefacts.

Archaeological Survey Methodology

We propose to undertake an archaeological survey of the subject area utilising a stratified sampling methodology. Methods will follow the *Code of Practice for Archaeological Investigation of Aboriginal Objects in NSW (2010)* and aim to identify any visible Aboriginal objects (material traces and evidence of Aboriginal land); as well as identify those areas where it can be inferred that, although not visible, material traces or evidence of Aboriginal land use have a likelihood of being present under the ground surface (potential archaeological deposits).

The survey strategy will utilise the following requirements of the Code and include:

1. Inspection of a sample of the landforms that will potentially be impacted;
2. Place a proportional emphasis on those landforms deemed to have archaeological potential;
3. Re-inspection of the GPS location of any previously recorded Aboriginal sites, in order to provide information on their current extent and significance;
4. Pedestrian survey of pre-determined transects;
5. Taking representative photographs of survey units and landforms where informative;

6. Recording landform and general soil information for each survey unit;
7. Recording the land surface and vegetation conditions encountered during the survey, accounting as appropriate for things like vegetation, rock outcrops, coarse fragments, etc.) and how these impact on the visibility of objects;
8. Recording any Aboriginal objects observed during the survey; and
9. Recording of spatial information suitable for mapping according to Code requirements and the calculation of survey coverage.

The archaeological survey is designed to sample the precincts in a systematic manner by targeting areas of ground surface visibility and including a representative sample of all landforms. Any areas of ground exposure will be examined for archaeological evidence such as stone artefacts, charcoal and shell. Ground surfaces and cut and fill features will also be examined to determine the degree of soil disturbance, erosion and potential for subsurface archaeological deposits.

The Archaeological survey will involve a five stage approach:

Stage 1 – In conjunction with the proponent, AHMS will seek contact with the landowners to arrange a date for the archaeological survey of each property to be conducted. AHMS will also seek advice from the landowners on access issues and discuss any stipulated requirements.

Stage 2 - An analysis of topographic maps and aerial photographs will be undertaken prior to the survey to identify landforms across the subject area and to identify areas of ground surface exposure in the form of tracks, unsealed roads, dams, cuttings and areas of ground exposure. Those properties that meet these requirements will then be targeted during the survey because they provide an opportunity to identify surface artefact scatters and to investigate exposed soil profiles. Properties that have been subject to extensive ground disturbance will be neglected in favour of undisturbed properties with high ground surface visibility in order to maximise the chance of identifying surface sites and potential archaeological deposits. The properties selected for survey will also reflect the range of landforms present within the subject areas.

Stage 3 - The first step when entering each property is to familiarize ourselves with the landscape and target areas of ground surface visibility.

Stage 4 - Following the initial scoping work, ground inspection will be conducted on foot in survey transects. Areas of ground surface visibility will be surveyed in their entirety. We propose to traverse approximately 70km in survey transects across both precincts.

Stage 5 – Any surface artefact scatters found during the survey will be recorded in detail using a pro-forma developed for field recording. The location and extent of each surface site would be recorded with a GPS. Field notes will be made and photographs taken to document landscape configuration, soil profiles, soil disturbance, ground visibility and vegetation types. Previously recorded sites will also be assessed in order to provide information on their current extent and significance.

The *OEH Due Diligence Code of Practice for the Protection of Aboriginal Objects* in New South Wales requires that when a desktop assessment and archaeological survey confirm the presence or likelihood of Aboriginal objects that will be harmed by a proposed development, further investigation is required.

However, if the results of the desktop research and archaeological survey indicate that there is a low likelihood for sub-surface Aboriginal objects with potential conservation value to be present within the study area and high levels of past disturbance have most likely removed or disturbed any Aboriginal sites or objects, then further archaeological investigation (in the form

of sub-surface testing) should not be considered warranted prior to the proponent undertaking an Aboriginal Heritage Impact Permit (AHIP).

Aboriginal Consultation

AHMS has recently begun the formal consultation process in accordance with OEH's *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW, 2010). The project currently has the following Registered Aboriginal Parties (RAPs):

- Deerubbin LALC;
- Darug Aboriginal Cultural Heritage Assessments;
- Darug Custodian Aboriginal Corporation;
- Darug Land Observations;
- Tocomwall;
- Phil Kahn;
- Tony Williams;
- Shane Williams;
- Darren Williams; and
- Andrew Williams.

Please note that unless otherwise advised, we are required to send details of all RAPs to OEH and Local Aboriginal Land Council as part of the consultation procedure.

Timeframes

AHMS proposes the following indicative timeframes for the project:

- Distribution of this document to the RAPs: 1 May 2014.
- End of review period for the proposed methodology: 28 May 2014.
- Field Survey: eight days to be undertaken in early June 2014.
- Review period of draft report: early July 2014.

Information Sought

AHMS would appreciate your review of the above methodology proposed for the investigation and assessment of the project.

In returning your answers, please include the following where appropriate:

- Any protocols that you would like adopted during the project;

ARCHAEOLOGICAL & HERITAGE MANAGEMENT SOLUTIONS

- Identification of any Aboriginal objects of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Identification of any places of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Guidance on the protocols, sensitivity, use and/or distribution of any cultural information that you provide AHMS;
- Whether you require any further information prior to AHMS proceeding with the project; and
- Any initial thoughts on the potential long term storage and/or management of the Aboriginal objects that may be recovered from the test excavations if they ensue.

Please ensure AHMS is also provided with your nominated individual's contact information including phone number, fax number, postal address and e-mail address (if available).

If you wish to be considered for participation in any fieldwork, please also provide information on the following:

- Current certificates of currency for relevant insurances;
- Information on hourly or daily rates;
- Information that may demonstrate experience in archaeological survey/excavation;
- An assurance that any proposed staff are 'fit for work' to undertake the physical labour of archaeological survey/excavation.
- An assurance that any proposed site staff are endorsed by a relevant section of the Aboriginal community and are able to confer and/or report back to them on project outcomes.

We also direct you to AHMS' policy and procedures on Aboriginal engagement, which will be provided with this document.

It is important that you understand that AHMS will compile and forward information for review by the proponent, but we do not decide who will be involved in any paid capacity.

If you like to arrange for any elders or other community members to be able to visit the site during the work, please let us know.

Riverstone East and Vineyard Precincts: Project Information and Proposed Aboriginal Cultural Heritage Assessment Methodology

Dear Steven,

Thank you for your registration of interest in the Aboriginal Cultural Heritage Assessment for the Riverstone East and Vineyard Growth Centre Precincts (**Figure 1**). Your interest in the project has been formally registered in accordance with the *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010*.

The subject areas comprise:

- Riverstone East Precinct, Blacktown Local Government Area: Riverstone East is some 650 hectares, and is bounded by Schofields Road to the south, Windsor Road to the north east and First Ponds creek to the west;
- Vineyard Precinct, Hawkesbury Local Government Area: Vineyard is some 500 hectares and is bounded by Commercial Road to the north, Boundary Road to the east and Windsor Road to the south.

AHMS understands that the Department of Planning & Environment proposes to re-zone the areas, and that the results of the ACHA will assist with the precinct planning process.

Enclosed is the proposed methodology for the Aboriginal Cultural Heritage Assessment which includes an archaeological survey. I would like to invite you to review the methodology and provide comment. Can you please provide any comments you may have by **(28 May 2014)**.

Thanks again for registering your interest and participation in this project. I look forward to receiving your response to the proposed methodology. If you have any questions, please do not hesitate to contact me on (02) 9555 4000.

Yours sincerely,

Alan Williams MAACAI

Manager NSW - Aboriginal Heritage

Contact Details

This letter has been prepared by Archaeological & Heritage Management Solutions Pty Ltd (AHMS) for the proponent, Department of Planning & Environment:

Background

The subject area comprises the Vineyard and Riverstone East Precincts. AHMS understands that the Department of Planning & Environment proposes to re-zone the subject area to allow for future urban development. THE ACHA will assist in this process by identifying archaeologically and culturally sensitive areas within the growth precincts.

AHMS will be undertaking the assessment in accordance with the relevant OEH (now part of NSW Department of Planning and Environment) guidelines. An important part of the assessment will be Aboriginal community consultation that aims to identify cultural values and places of importance to the Aboriginal community within the subject area.

A review of the AHIMS database has indicated that there are:

- 4 registered sites within the Vineyard Precinct;
- 9 registered sites within the Riverstone East Precinct.

As the proposed works may have the potential to impact on Aboriginal cultural heritage in the future, the Department of Planning & Environment have engaged AHMS, to undertake an Aboriginal Cultural Heritage Assessment (ACHA) of the study area in accordance with OEH guidelines. The ACHA will assess the potential impact of any proposed future development, and will provide the necessary documentation to apply for an Aboriginal Heritage Impact Permit (AHIP), or Permits, should one be required.

Proposed Assessment Methodology

AHMS proposes to develop an ACHA in accordance with the latest OEH guidelines for the proposed development, being:

- *Guide to Investigating, Assessing and Reporting on Aboriginal Cultural Heritage in NSW* (OEH 2011);
- *Code of Practice for Archaeological Investigation of Aboriginal Objects in New South Wales* (DECCW 2010); and
- *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW 2010).

Development of the ACHA will include the following tasks:

- Aboriginal community consultation;
- Archaeological survey (further detail is provided below). This component would be undertaken in conjunction with representatives of the Registered Aboriginal Parties (RAPs) based on selective commercial engagements determined by the client;
- Preparation of the ACHA, which incorporates Aboriginal consultation and any cultural information provided, outlines the findings of the archaeological survey, assesses potential impacts to Aboriginal heritage, and makes recommendations on any Aboriginal heritage sites and/or objects that may be present within the proposed subject area;
- If required, prepare an application for an Aboriginal Heritage Impact Permit (AHIP) or Permits to allow the proposed activity and/or additional mitigation measures to be conducted;
- If sites are identified, submit Site Cards and Site Impact Recording Forms to OEH; and
- If required, develop a Care and Control agreement for recovered artefacts and/or submit a site update card to OEH upon reburial of artefacts.

Archaeological Survey Methodology

We propose to undertake an archaeological survey of the subject area utilising a stratified sampling methodology. Methods will follow the *Code of Practice for Archaeological Investigation of Aboriginal Objects in NSW (2010)* and aim to identify any visible Aboriginal objects (material traces and evidence of Aboriginal land); as well as identify those areas where it can be inferred that, although not visible, material traces or evidence of Aboriginal land use have a likelihood of being present under the ground surface (potential archaeological deposits).

The survey strategy will utilise the following requirements of the Code and include:

1. Inspection of a sample of the landforms that will potentially be impacted;
2. Place a proportional emphasis on those landforms deemed to have archaeological potential;
3. Re-inspection of the GPS location of any previously recorded Aboriginal sites, in order to provide information on their current extent and significance;
4. Pedestrian survey of pre-determined transects;
5. Taking representative photographs of survey units and landforms where informative;

6. Recording landform and general soil information for each survey unit;
7. Recording the land surface and vegetation conditions encountered during the survey, accounting as appropriate for things like vegetation, rock outcrops, coarse fragments, etc.) and how these impact on the visibility of objects;
8. Recording any Aboriginal objects observed during the survey; and
9. Recording of spatial information suitable for mapping according to Code requirements and the calculation of survey coverage.

The archaeological survey is designed to sample the precincts in a systematic manner by targeting areas of ground surface visibility and including a representative sample of all landforms. Any areas of ground exposure will be examined for archaeological evidence such as stone artefacts, charcoal and shell. Ground surfaces and cut and fill features will also be examined to determine the degree of soil disturbance, erosion and potential for subsurface archaeological deposits.

The Archaeological survey will involve a five stage approach:

Stage 1 – In conjunction with the proponent, AHMS will seek contact with the landowners to arrange a date for the archaeological survey of each property to be conducted. AHMS will also seek advice from the landowners on access issues and discuss any stipulated requirements.

Stage 2 - An analysis of topographic maps and aerial photographs will be undertaken prior to the survey to identify landforms across the subject area and to identify areas of ground surface exposure in the form of tracks, unsealed roads, dams, cuttings and areas of ground exposure. Those properties that meet these requirements will then be targeted during the survey because they provide an opportunity to identify surface artefact scatters and to investigate exposed soil profiles. Properties that have been subject to extensive ground disturbance will be neglected in favour of undisturbed properties with high ground surface visibility in order to maximise the chance of identifying surface sites and potential archaeological deposits. The properties selected for survey will also reflect the range of landforms present within the subject areas.

Stage 3 - The first step when entering each property is to familiarize ourselves with the landscape and target areas of ground surface visibility.

Stage 4 - Following the initial scoping work, ground inspection will be conducted on foot in survey transects. Areas of ground surface visibility will be surveyed in their entirety. We propose to traverse approximately 70km in survey transects across both precincts.

Stage 5 – Any surface artefact scatters found during the survey will be recorded in detail using a pro-forma developed for field recording. The location and extent of each surface site would be recorded with a GPS. Field notes will be made and photographs taken to document landscape configuration, soil profiles, soil disturbance, ground visibility and vegetation types. Previously recorded sites will also be assessed in order to provide information on their current extent and significance.

The *OEH Due Diligence Code of Practice for the Protection of Aboriginal Objects* in New South Wales requires that when a desktop assessment and archaeological survey confirm the presence or likelihood of Aboriginal objects that will be harmed by a proposed development, further investigation is required.

However, if the results of the desktop research and archaeological survey indicate that there is a low likelihood for sub-surface Aboriginal objects with potential conservation value to be present within the study area and high levels of past disturbance have most likely removed or disturbed any Aboriginal sites or objects, then further archaeological investigation (in the form

of sub-surface testing) should not be considered warranted prior to the proponent undertaking an Aboriginal Heritage Impact Permit (AHIP).

Aboriginal Consultation

AHMS has recently begun the formal consultation process in accordance with OEH's *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW, 2010). The project currently has the following Registered Aboriginal Parties (RAPs):

- Deerubbin LALC;
- Darug Aboriginal Cultural Heritage Assessments;
- Darug Custodian Aboriginal Corporation;
- Darug Land Observations;
- Tocomwall;
- Phil Kahn;
- Tony Williams;
- Shane Williams;
- Darren Williams; and
- Andrew Williams.

Please note that unless otherwise advised, we are required to send details of all RAPs to OEH and Local Aboriginal Land Council as part of the consultation procedure.

Timeframes

AHMS proposes the following indicative timeframes for the project:

- Distribution of this document to the RAPs: 1 May 2014.
- End of review period for the proposed methodology: 28 May 2014.
- Field Survey: eight days to be undertaken in early June 2014.
- Review period of draft report: early July 2014.

Information Sought

AHMS would appreciate your review of the above methodology proposed for the investigation and assessment of the project.

In returning your answers, please include the following where appropriate:

- Any protocols that you would like adopted during the project;

ARCHAEOLOGICAL & HERITAGE MANAGEMENT SOLUTIONS

- Identification of any Aboriginal objects of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Identification of any places of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Guidance on the protocols, sensitivity, use and/or distribution of any cultural information that you provide AHMS;
- Whether you require any further information prior to AHMS proceeding with the project; and
- Any initial thoughts on the potential long term storage and/or management of the Aboriginal objects that may be recovered from the test excavations if they ensue.

Please ensure AHMS is also provided with your nominated individual's contact information including phone number, fax number, postal address and e-mail address (if available).

If you wish to be considered for participation in any fieldwork, please also provide information on the following:

- Current certificates of currency for relevant insurances;
- Information on hourly or daily rates;
- Information that may demonstrate experience in archaeological survey/excavation;
- An assurance that any proposed staff are 'fit for work' to undertake the physical labour of archaeological survey/excavation.
- An assurance that any proposed site staff are endorsed by a relevant section of the Aboriginal community and are able to confer and/or report back to them on project outcomes.

We also direct you to AHMS' policy and procedures on Aboriginal engagement, which will be provided with this document.

It is important that you understand that AHMS will compile and forward information for review by the proponent, but we do not decide who will be involved in any paid capacity.

If you like to arrange for any elders or other community members to be able to visit the site during the work, please let us know.

Riverstone East and Vineyard Precincts: Project Information and Proposed Aboriginal Cultural Heritage Assessment Methodology

Dear Leanne,

Thank you for your registration of interest in the Aboriginal Cultural Heritage Assessment for the Riverstone East and Vineyard Growth Centre Precincts (**Figure 1**). Your interest in the project has been formally registered in accordance with the *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010*.

The subject areas comprise:

- Riverstone East Precinct, Blacktown Local Government Area: Riverstone East is some 650 hectares, and is bounded by Schofields Road to the south, Windsor Road to the north east and First Ponds creek to the west;
- Vineyard Precinct, Hawkesbury Local Government Area: Vineyard is some 500 hectares and is bounded by Commercial Road to the north, Boundary Road to the east and Windsor Road to the south.

AHMS understands that the Department of Planning & Environment proposes to re-zone the areas, and that the results of the ACHA will assist with the precinct planning process.

Enclosed is the proposed methodology for the Aboriginal Cultural Heritage Assessment which includes an archaeological survey. I would like to invite you to review the methodology and provide comment. Can you please provide any comments you may have by **(28 May 2014)**.

Thanks again for registering your interest and participation in this project. I look forward to receiving your response to the proposed methodology. If you have any questions, please do not hesitate to contact me on (02) 9555 4000.

Yours sincerely,

Alan Williams MAACAI

Manager NSW - Aboriginal Heritage

Contact Details

This letter has been prepared by Archaeological & Heritage Management Solutions Pty Ltd (AHMS) for the proponent, Department of Planning & Environment:

Table 1 - Contact Details

Background

The subject area comprises the Vineyard and Riverstone East Precincts. AHMS understands that the Department of Planning & Environment proposes to re-zone the subject area to allow for future urban development. THE ACHA will assist in this process by identifying archaeologically and culturally sensitive areas within the growth precincts.

AHMS will be undertaking the assessment in accordance with the relevant OEH (now part of NSW Department of Planning and Environment) guidelines. An important part of the assessment will be Aboriginal community consultation that aims to identify cultural values and places of importance to the Aboriginal community within the subject area.

A review of the AHIMS database has indicated that there are:

- 4 registered sites within the Vineyard Precinct;
- 9 registered sites within the Riverstone East Precinct.

As the proposed works may have the potential to impact on Aboriginal cultural heritage in the future, the Department of Planning & Environment have engaged AHMS, to undertake an Aboriginal Cultural Heritage Assessment (ACHA) of the study area in accordance with OEH guidelines. The ACHA will assess the potential impact of any proposed future development, and will provide the necessary documentation to apply for an Aboriginal Heritage Impact Permit (AHIP), or Permits, should one be required.

Proposed Assessment Methodology

AHMS proposes to develop an ACHA in accordance with the latest OEH guidelines for the proposed development, being:

- *Guide to Investigating, Assessing and Reporting on Aboriginal Cultural Heritage in NSW* (OEH 2011);
- *Code of Practice for Archaeological Investigation of Aboriginal Objects in New South Wales* (DECCW 2010); and
- *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW 2010).

Development of the ACHA will include the following tasks:

- Aboriginal community consultation;
- Archaeological survey (further detail is provided below). This component would be undertaken in conjunction with representatives of the Registered Aboriginal Parties (RAPs) based on selective commercial engagements determined by the client;
- Preparation of the ACHA, which incorporates Aboriginal consultation and any cultural information provided, outlines the findings of the archaeological survey, assesses potential impacts to Aboriginal heritage, and makes recommendations on any Aboriginal heritage sites and/or objects that may be present within the proposed subject area;
- If required, prepare an application for an Aboriginal Heritage Impact Permit (AHIP) or Permits to allow the proposed activity and/or additional mitigation measures to be conducted;
- If sites are identified, submit Site Cards and Site Impact Recording Forms to OEH; and
- If required, develop a Care and Control agreement for recovered artefacts and/or submit a site update card to OEH upon reburial of artefacts.

Archaeological Survey Methodology

We propose to undertake an archaeological survey of the subject area utilising a stratified sampling methodology. Methods will follow the *Code of Practice for Archaeological Investigation of Aboriginal Objects in NSW (2010)* and aim to identify any visible Aboriginal objects (material traces and evidence of Aboriginal land); as well as identify those areas where it can be inferred that, although not visible, material traces or evidence of Aboriginal land use have a likelihood of being present under the ground surface (potential archaeological deposits).

The survey strategy will utilise the following requirements of the Code and include:

1. Inspection of a sample of the landforms that will potentially be impacted;
2. Place a proportional emphasis on those landforms deemed to have archaeological potential;
3. Re-inspection of the GPS location of any previously recorded Aboriginal sites, in order to provide information on their current extent and significance;
4. Pedestrian survey of pre-determined transects;
5. Taking representative photographs of survey units and landforms where informative;

6. Recording landform and general soil information for each survey unit;
7. Recording the land surface and vegetation conditions encountered during the survey, accounting as appropriate for things like vegetation, rock outcrops, coarse fragments, etc.) and how these impact on the visibility of objects;
8. Recording any Aboriginal objects observed during the survey; and
9. Recording of spatial information suitable for mapping according to Code requirements and the calculation of survey coverage.

The archaeological survey is designed to sample the precincts in a systematic manner by targeting areas of ground surface visibility and including a representative sample of all landforms. Any areas of ground exposure will be examined for archaeological evidence such as stone artefacts, charcoal and shell. Ground surfaces and cut and fill features will also be examined to determine the degree of soil disturbance, erosion and potential for subsurface archaeological deposits.

The Archaeological survey will involve a five stage approach:

Stage 1 – In conjunction with the proponent, AHMS will seek contact with the landowners to arrange a date for the archaeological survey of each property to be conducted. AHMS will also seek advice from the landowners on access issues and discuss any stipulated requirements.

Stage 2 - An analysis of topographic maps and aerial photographs will be undertaken prior to the survey to identify landforms across the subject area and to identify areas of ground surface exposure in the form of tracks, unsealed roads, dams, cuttings and areas of ground exposure. Those properties that meet these requirements will then be targeted during the survey because they provide an opportunity to identify surface artefact scatters and to investigate exposed soil profiles. Properties that have been subject to extensive ground disturbance will be neglected in favour of undisturbed properties with high ground surface visibility in order to maximise the chance of identifying surface sites and potential archaeological deposits. The properties selected for survey will also reflect the range of landforms present within the subject areas.

Stage 3 - The first step when entering each property is to familiarize ourselves with the landscape and target areas of ground surface visibility.

Stage 4 - Following the initial scoping work, ground inspection will be conducted on foot in survey transects. Areas of ground surface visibility will be surveyed in their entirety. We propose to traverse approximately 70km in survey transects across both precincts.

Stage 5 – Any surface artefact scatters found during the survey will be recorded in detail using a pro-forma developed for field recording. The location and extent of each surface site would be recorded with a GPS. Field notes will be made and photographs taken to document landscape configuration, soil profiles, soil disturbance, ground visibility and vegetation types. Previously recorded sites will also be assessed in order to provide information on their current extent and significance.

The *OEH Due Diligence Code of Practice for the Protection of Aboriginal Objects* in New South Wales requires that when a desktop assessment and archaeological survey confirm the presence or likelihood of Aboriginal objects that will be harmed by a proposed development, further investigation is required.

However, if the results of the desktop research and archaeological survey indicate that there is a low likelihood for sub-surface Aboriginal objects with potential conservation value to be present within the study area and high levels of past disturbance have most likely removed or disturbed any Aboriginal sites or objects, then further archaeological investigation (in the form

of sub-surface testing) should not be considered warranted prior to the proponent undertaking an Aboriginal Heritage Impact Permit (AHIP).

Aboriginal Consultation

AHMS has recently begun the formal consultation process in accordance with OEH's *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW, 2010). The project currently has the following Registered Aboriginal Parties (RAPs):

- Deerubbin LALC;
- Darug Aboriginal Cultural Heritage Assessments;
- Darug Custodian Aboriginal Corporation;
- Darug Land Observations;
- Tocomwall;
- Phil Kahn;
- Tony Williams;
- Shane Williams;
- Darren Williams; and
- Andrew Williams.

Please note that unless otherwise advised, we are required to send details of all RAPs to OEH and Local Aboriginal Land Council as part of the consultation procedure.

Timeframes

AHMS proposes the following indicative timeframes for the project:

- Distribution of this document to the RAPs: 1 May 2014.
- End of review period for the proposed methodology: 28 May 2014.
- Field Survey: eight days to be undertaken in early June 2014.
- Review period of draft report: early July 2014.

Information Sought

AHMS would appreciate your review of the above methodology proposed for the investigation and assessment of the project.

In returning your answers, please include the following where appropriate:

- Any protocols that you would like adopted during the project;

ARCHAEOLOGICAL & HERITAGE MANAGEMENT SOLUTIONS

- Identification of any Aboriginal objects of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Identification of any places of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Guidance on the protocols, sensitivity, use and/or distribution of any cultural information that you provide AHMS;
- Whether you require any further information prior to AHMS proceeding with the project; and
- Any initial thoughts on the potential long term storage and/or management of the Aboriginal objects that may be recovered from the test excavations if they ensue.

Please ensure AHMS is also provided with your nominated individual's contact information including phone number, fax number, postal address and e-mail address (if available).

If you wish to be considered for participation in any fieldwork, please also provide information on the following:

- Current certificates of currency for relevant insurances;
- Information on hourly or daily rates;
- Information that may demonstrate experience in archaeological survey/excavation;
- An assurance that any proposed staff are 'fit for work' to undertake the physical labour of archaeological survey/excavation.
- An assurance that any proposed site staff are endorsed by a relevant section of the Aboriginal community and are able to confer and/or report back to them on project outcomes.

We also direct you to AHMS' policy and procedures on Aboriginal engagement, which will be provided with this document.

It is important that you understand that AHMS will compile and forward information for review by the proponent, but we do not decide who will be involved in any paid capacity.

If you like to arrange for any elders or other community members to be able to visit the site during the work, please let us know.

Riverstone East and Vineyard Precincts: Project Information and Proposed Aboriginal Cultural Heritage Assessment Methodology

Dear Cherie,

Thank you for your registration of interest in the Aboriginal Cultural Heritage Assessment for the Riverstone East and Vineyard Growth Centre Precincts (**Figure 1**). Your interest in the project has been formally registered in accordance with the *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010*.

The subject areas comprise:

- Riverstone East Precinct, Blacktown Local Government Area: Riverstone East is some 650 hectares, and is bounded by Schofields Road to the south, Windsor Road to the north east and First Ponds creek to the west;
- Vineyard Precinct, Hawkesbury Local Government Area: Vineyard is some 500 hectares and is bounded by Commercial Road to the north, Boundary Road to the east and Windsor Road to the south.

AHMS understands that the Department of Planning & Environment proposes to re-zone the areas, and that the results of the ACHA will assist with the precinct planning process.

Enclosed is the proposed methodology for the Aboriginal Cultural Heritage Assessment which includes an archaeological survey. I would like to invite you to review the methodology and provide comment. Can you please provide any comments you may have by **(28 May 2014)**.

Thanks again for registering your interest and participation in this project. I look forward to receiving your response to the proposed methodology. If you have any questions, please do not hesitate to contact me on (02) 9555 4000.

Yours sincerely,

Alan Williams MAACAI

Manager NSW - Aboriginal Heritage

Background

The subject area comprises the Vineyard and Riverstone East Precincts. AHMS understands that the Department of Planning & Environment proposes to re-zone the subject area to allow for future urban development. THE ACHA will assist in this process by identifying archaeologically and culturally sensitive areas within the growth precincts.

AHMS will be undertaking the assessment in accordance with the relevant OEH (now part of NSW Department of Planning and Environment) guidelines. An important part of the assessment will be Aboriginal community consultation that aims to identify cultural values and places of importance to the Aboriginal community within the subject area.

A review of the AHIMS database has indicated that there are:

- 4 registered sites within the Vineyard Precinct;
- 9 registered sites within the Riverstone East Precinct.

As the proposed works may have the potential to impact on Aboriginal cultural heritage in the future, the Department of Planning & Environment have engaged AHMS, to undertake an Aboriginal Cultural Heritage Assessment (ACHA) of the study area in accordance with OEH guidelines. The ACHA will assess the potential impact of any proposed future development, and will provide the necessary documentation to apply for an Aboriginal Heritage Impact Permit (AHIP), or Permits, should one be required.

Proposed Assessment Methodology

AHMS proposes to develop an ACHA in accordance with the latest OEH guidelines for the proposed development, being:

- *Guide to Investigating, Assessing and Reporting on Aboriginal Cultural Heritage in NSW* (OEH 2011);
- *Code of Practice for Archaeological Investigation of Aboriginal Objects in New South Wales* (DECCW 2010); and
- *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW 2010).

Development of the ACHA will include the following tasks:

- Aboriginal community consultation;
- Archaeological survey (further detail is provided below). This component would be undertaken in conjunction with representatives of the Registered Aboriginal Parties (RAPs) based on selective commercial engagements determined by the client;
- Preparation of the ACHA, which incorporates Aboriginal consultation and any cultural information provided, outlines the findings of the archaeological survey, assesses potential impacts to Aboriginal heritage, and makes recommendations on any Aboriginal heritage sites and/or objects that may be present within the proposed subject area;
- If required, prepare an application for an Aboriginal Heritage Impact Permit (AHIP) or Permits to allow the proposed activity and/or additional mitigation measures to be conducted;
- If sites are identified, submit Site Cards and Site Impact Recording Forms to OEH; and
- If required, develop a Care and Control agreement for recovered artefacts and/or submit a site update card to OEH upon reburial of artefacts.

Archaeological Survey Methodology

We propose to undertake an archaeological survey of the subject area utilising a stratified sampling methodology. Methods will follow the *Code of Practice for Archaeological Investigation of Aboriginal Objects in NSW (2010)* and aim to identify any visible Aboriginal objects (material traces and evidence of Aboriginal land); as well as identify those areas where it can be inferred that, although not visible, material traces or evidence of Aboriginal land use have a likelihood of being present under the ground surface (potential archaeological deposits).

The survey strategy will utilise the following requirements of the Code and include:

1. Inspection of a sample of the landforms that will potentially be impacted;
2. Place a proportional emphasis on those landforms deemed to have archaeological potential;
3. Re-inspection of the GPS location of any previously recorded Aboriginal sites, in order to provide information on their current extent and significance;
4. Pedestrian survey of pre-determined transects;
5. Taking representative photographs of survey units and landforms where informative;

6. Recording landform and general soil information for each survey unit;
7. Recording the land surface and vegetation conditions encountered during the survey, accounting as appropriate for things like vegetation, rock outcrops, coarse fragments, etc.) and how these impact on the visibility of objects;
8. Recording any Aboriginal objects observed during the survey; and
9. Recording of spatial information suitable for mapping according to Code requirements and the calculation of survey coverage.

The archaeological survey is designed to sample the precincts in a systematic manner by targeting areas of ground surface visibility and including a representative sample of all landforms. Any areas of ground exposure will be examined for archaeological evidence such as stone artefacts, charcoal and shell. Ground surfaces and cut and fill features will also be examined to determine the degree of soil disturbance, erosion and potential for subsurface archaeological deposits.

The Archaeological survey will involve a five stage approach:

Stage 1 – In conjunction with the proponent, AHMS will seek contact with the landowners to arrange a date for the archaeological survey of each property to be conducted. AHMS will also seek advice from the landowners on access issues and discuss any stipulated requirements.

Stage 2 - An analysis of topographic maps and aerial photographs will be undertaken prior to the survey to identify landforms across the subject area and to identify areas of ground surface exposure in the form of tracks, unsealed roads, dams, cuttings and areas of ground exposure. Those properties that meet these requirements will then be targeted during the survey because they provide an opportunity to identify surface artefact scatters and to investigate exposed soil profiles. Properties that have been subject to extensive ground disturbance will be neglected in favour of undisturbed properties with high ground surface visibility in order to maximise the chance of identifying surface sites and potential archaeological deposits. The properties selected for survey will also reflect the range of landforms present within the subject areas.

Stage 3 - The first step when entering each property is to familiarize ourselves with the landscape and target areas of ground surface visibility.

Stage 4 - Following the initial scoping work, ground inspection will be conducted on foot in survey transects. Areas of ground surface visibility will be surveyed in their entirety. We propose to traverse approximately 70km in survey transects across both precincts.

Stage 5 – Any surface artefact scatters found during the survey will be recorded in detail using a pro-forma developed for field recording. The location and extent of each surface site would be recorded with a GPS. Field notes will be made and photographs taken to document landscape configuration, soil profiles, soil disturbance, ground visibility and vegetation types. Previously recorded sites will also be assessed in order to provide information on their current extent and significance.

The *OEH Due Diligence Code of Practice for the Protection of Aboriginal Objects* in New South Wales requires that when a desktop assessment and archaeological survey confirm the presence or likelihood of Aboriginal objects that will be harmed by a proposed development, further investigation is required.

However, if the results of the desktop research and archaeological survey indicate that there is a low likelihood for sub-surface Aboriginal objects with potential conservation value to be present within the study area and high levels of past disturbance have most likely removed or disturbed any Aboriginal sites or objects, then further archaeological investigation (in the form

of sub-surface testing) should not be considered warranted prior to the proponent undertaking an Aboriginal Heritage Impact Permit (AHIP).

Aboriginal Consultation

AHMS has recently begun the formal consultation process in accordance with OEH's *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW, 2010). The project currently has the following Registered Aboriginal Parties (RAPs):

- Deerubbin LALC;
- Darug Aboriginal Cultural Heritage Assessments;
- Darug Custodian Aboriginal Corporation;
- Darug Land Observations;
- Tocomwall;
- Phil Kahn;
- Tony Williams;
- Shane Williams;
- Darren Williams; and
- Andrew Williams.

Please note that unless otherwise advised, we are required to send details of all RAPs to OEH and Local Aboriginal Land Council as part of the consultation procedure.

Timeframes

AHMS proposes the following indicative timeframes for the project:

- Distribution of this document to the RAPs: 1 May 2014.
- End of review period for the proposed methodology: 28 May 2014.
- Field Survey: eight days to be undertaken in early June 2014.
- Review period of draft report: early July 2014.

Information Sought

AHMS would appreciate your review of the above methodology proposed for the investigation and assessment of the project.

In returning your answers, please include the following where appropriate:

- Any protocols that you would like adopted during the project;

ARCHAEOLOGICAL & HERITAGE MANAGEMENT SOLUTIONS

- Identification of any Aboriginal objects of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Identification of any places of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Guidance on the protocols, sensitivity, use and/or distribution of any cultural information that you provide AHMS;
- Whether you require any further information prior to AHMS proceeding with the project; and
- Any initial thoughts on the potential long term storage and/or management of the Aboriginal objects that may be recovered from the test excavations if they ensue.

Please ensure AHMS is also provided with your nominated individual's contact information including phone number, fax number, postal address and e-mail address (if available).

If you wish to be considered for participation in any fieldwork, please also provide information on the following:

- Current certificates of currency for relevant insurances;
- Information on hourly or daily rates;
- Information that may demonstrate experience in archaeological survey/excavation;
- An assurance that any proposed staff are 'fit for work' to undertake the physical labour of archaeological survey/excavation.
- An assurance that any proposed site staff are endorsed by a relevant section of the Aboriginal community and are able to confer and/or report back to them on project outcomes.

We also direct you to AHMS' policy and procedures on Aboriginal engagement, which will be provided with this document.

It is important that you understand that AHMS will compile and forward information for review by the proponent, but we do not decide who will be involved in any paid capacity.

If you like to arrange for any elders or other community members to be able to visit the site during the work, please let us know.

Riverstone East and Vineyard Precincts: Project Information and Proposed Aboriginal Cultural Heritage Assessment Methodology

Dear Phil,

Thank you for your registration of interest in the Aboriginal Cultural Heritage Assessment for the Riverstone East and Vineyard Growth Centre Precincts (**Figure 1**). Your interest in the project has been formally registered in accordance with the *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010*.

The subject areas comprise:

- Riverstone East Precinct, Blacktown Local Government Area: Riverstone East is some 650 hectares, and is bounded by Schofields Road to the south, Windsor Road to the north east and First Ponds creek to the west;
- Vineyard Precinct, Hawkesbury Local Government Area: Vineyard is some 500 hectares and is bounded by Commercial Road to the north, Boundary Road to the east and Windsor Road to the south.

AHMS understands that the Department of Planning & Environment proposes to re-zone the areas, and that the results of the ACHA will assist with the precinct planning process.

Enclosed is the proposed methodology for the Aboriginal Cultural Heritage Assessment which includes an archaeological survey. I would like to invite you to review the methodology and provide comment. Can you please provide any comments you may have by **(28 May 2014)**.

Thanks again for registering your interest and participation in this project. I look forward to receiving your response to the proposed methodology. If you have any questions, please do not hesitate to contact me on (02) 9555 4000.

Yours sincerely,

Alan Williams MAACAI

Manager NSW - Aboriginal Heritage

Background

The subject area comprises the Vineyard and Riverstone East Precincts. AHMS understands that the Department of Planning & Environment proposes to re-zone the subject area to allow for future urban development. THE ACHA will assist in this process by identifying archaeologically and culturally sensitive areas within the growth precincts.

AHMS will be undertaking the assessment in accordance with the relevant OEH (now part of NSW Department of Planning and Environment) guidelines. An important part of the assessment will be Aboriginal community consultation that aims to identify cultural values and places of importance to the Aboriginal community within the subject area.

A review of the AHIMS database has indicated that there are:

- 4 registered sites within the Vineyard Precinct;
- 9 registered sites within the Riverstone East Precinct.

As the proposed works may have the potential to impact on Aboriginal cultural heritage in the future, the Department of Planning & Environment have engaged AHMS, to undertake an Aboriginal Cultural Heritage Assessment (ACHA) of the study area in accordance with OEH guidelines. The ACHA will assess the potential impact of any proposed future development, and will provide the necessary documentation to apply for an Aboriginal Heritage Impact Permit (AHIP), or Permits, should one be required.

Proposed Assessment Methodology

AHMS proposes to develop an ACHA in accordance with the latest OEH guidelines for the proposed development, being:

- *Guide to Investigating, Assessing and Reporting on Aboriginal Cultural Heritage in NSW* (OEH 2011);
- *Code of Practice for Archaeological Investigation of Aboriginal Objects in New South Wales* (DECCW 2010); and
- *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW 2010).

Development of the ACHA will include the following tasks:

- Aboriginal community consultation;
- Archaeological survey (further detail is provided below). This component would be undertaken in conjunction with representatives of the Registered Aboriginal Parties (RAPs) based on selective commercial engagements determined by the client;
- Preparation of the ACHA, which incorporates Aboriginal consultation and any cultural information provided, outlines the findings of the archaeological survey, assesses potential impacts to Aboriginal heritage, and makes recommendations on any Aboriginal heritage sites and/or objects that may be present within the proposed subject area;
- If required, prepare an application for an Aboriginal Heritage Impact Permit (AHIP) or Permits to allow the proposed activity and/or additional mitigation measures to be conducted;
- If sites are identified, submit Site Cards and Site Impact Recording Forms to OEH; and
- If required, develop a Care and Control agreement for recovered artefacts and/or submit a site update card to OEH upon reburial of artefacts.

Archaeological Survey Methodology

We propose to undertake an archaeological survey of the subject area utilising a stratified sampling methodology. Methods will follow the *Code of Practice for Archaeological Investigation of Aboriginal Objects in NSW (2010)* and aim to identify any visible Aboriginal objects (material traces and evidence of Aboriginal land); as well as identify those areas where it can be inferred that, although not visible, material traces or evidence of Aboriginal land use have a likelihood of being present under the ground surface (potential archaeological deposits).

The survey strategy will utilise the following requirements of the Code and include:

1. Inspection of a sample of the landforms that will potentially be impacted;
2. Place a proportional emphasis on those landforms deemed to have archaeological potential;
3. Re-inspection of the GPS location of any previously recorded Aboriginal sites, in order to provide information on their current extent and significance;
4. Pedestrian survey of pre-determined transects;
5. Taking representative photographs of survey units and landforms where informative;

6. Recording landform and general soil information for each survey unit;
7. Recording the land surface and vegetation conditions encountered during the survey, accounting as appropriate for things like vegetation, rock outcrops, coarse fragments, etc.) and how these impact on the visibility of objects;
8. Recording any Aboriginal objects observed during the survey; and
9. Recording of spatial information suitable for mapping according to Code requirements and the calculation of survey coverage.

The archaeological survey is designed to sample the precincts in a systematic manner by targeting areas of ground surface visibility and including a representative sample of all landforms. Any areas of ground exposure will be examined for archaeological evidence such as stone artefacts, charcoal and shell. Ground surfaces and cut and fill features will also be examined to determine the degree of soil disturbance, erosion and potential for subsurface archaeological deposits.

The Archaeological survey will involve a five stage approach:

Stage 1 – In conjunction with the proponent, AHMS will seek contact with the landowners to arrange a date for the archaeological survey of each property to be conducted. AHMS will also seek advice from the landowners on access issues and discuss any stipulated requirements.

Stage 2 - An analysis of topographic maps and aerial photographs will be undertaken prior to the survey to identify landforms across the subject area and to identify areas of ground surface exposure in the form of tracks, unsealed roads, dams, cuttings and areas of ground exposure. Those properties that meet these requirements will then be targeted during the survey because they provide an opportunity to identify surface artefact scatters and to investigate exposed soil profiles. Properties that have been subject to extensive ground disturbance will be neglected in favour of undisturbed properties with high ground surface visibility in order to maximise the chance of identifying surface sites and potential archaeological deposits. The properties selected for survey will also reflect the range of landforms present within the subject areas.

Stage 3 - The first step when entering each property is to familiarize ourselves with the landscape and target areas of ground surface visibility.

Stage 4 - Following the initial scoping work, ground inspection will be conducted on foot in survey transects. Areas of ground surface visibility will be surveyed in their entirety. We propose to traverse approximately 70km in survey transects across both precincts.

Stage 5 – Any surface artefact scatters found during the survey will be recorded in detail using a pro-forma developed for field recording. The location and extent of each surface site would be recorded with a GPS. Field notes will be made and photographs taken to document landscape configuration, soil profiles, soil disturbance, ground visibility and vegetation types. Previously recorded sites will also be assessed in order to provide information on their current extent and significance.

The *OEH Due Diligence Code of Practice for the Protection of Aboriginal Objects* in New South Wales requires that when a desktop assessment and archaeological survey confirm the presence or likelihood of Aboriginal objects that will be harmed by a proposed development, further investigation is required.

However, if the results of the desktop research and archaeological survey indicate that there is a low likelihood for sub-surface Aboriginal objects with potential conservation value to be present within the study area and high levels of past disturbance have most likely removed or disturbed any Aboriginal sites or objects, then further archaeological investigation (in the form

of sub-surface testing) should not be considered warranted prior to the proponent undertaking an Aboriginal Heritage Impact Permit (AHIP).

Aboriginal Consultation

AHMS has recently begun the formal consultation process in accordance with OEH's *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW, 2010). The project currently has the following Registered Aboriginal Parties (RAPs):

- Deerubbin LALC;
- Darug Aboriginal Cultural Heritage Assessments;
- Darug Custodian Aboriginal Corporation;
- Darug Land Observations;
- Tocomwall;
- Phil Kahn;
- Tony Williams;
- Shane Williams;
- Darren Williams; and
- Andrew Williams.

Please note that unless otherwise advised, we are required to send details of all RAPs to OEH and Local Aboriginal Land Council as part of the consultation procedure.

Timeframes

AHMS proposes the following indicative timeframes for the project:

- Distribution of this document to the RAPs: 1 May 2014.
- End of review period for the proposed methodology: 28 May 2014.
- Field Survey: eight days to be undertaken in early June 2014.
- Review period of draft report: early July 2014.

Information Sought

AHMS would appreciate your review of the above methodology proposed for the investigation and assessment of the project.

In returning your answers, please include the following where appropriate:

- Any protocols that you would like adopted during the project;

ARCHAEOLOGICAL & HERITAGE MANAGEMENT SOLUTIONS

- Identification of any Aboriginal objects of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Identification of any places of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Guidance on the protocols, sensitivity, use and/or distribution of any cultural information that you provide AHMS;
- Whether you require any further information prior to AHMS proceeding with the project; and
- Any initial thoughts on the potential long term storage and/or management of the Aboriginal objects that may be recovered from the test excavations if they ensue.

Please ensure AHMS is also provided with your nominated individual's contact information including phone number, fax number, postal address and e-mail address (if available).

If you wish to be considered for participation in any fieldwork, please also provide information on the following:

- Current certificates of currency for relevant insurances;
- Information on hourly or daily rates;
- Information that may demonstrate experience in archaeological survey/excavation;
- An assurance that any proposed staff are 'fit for work' to undertake the physical labour of archaeological survey/excavation.
- An assurance that any proposed site staff are endorsed by a relevant section of the Aboriginal community and are able to confer and/or report back to them on project outcomes.

We also direct you to AHMS' policy and procedures on Aboriginal engagement, which will be provided with this document.

It is important that you understand that AHMS will compile and forward information for review by the proponent, but we do not decide who will be involved in any paid capacity.

If you like to arrange for any elders or other community members to be able to visit the site during the work, please let us know.

Riverstone East and Vineyard Precincts: Project Information and Proposed Aboriginal Cultural Heritage Assessment Methodology

Dear Tony,

Thank you for your registration of interest in the Aboriginal Cultural Heritage Assessment for the Riverstone East and Vineyard Growth Centre Precincts (**Figure 1**). Your interest in the project has been formally registered in accordance with the *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010*.

The subject areas comprise:

- Riverstone East Precinct, Blacktown Local Government Area: Riverstone East is some 650 hectares, and is bounded by Schofields Road to the south, Windsor Road to the north east and First Ponds creek to the west;
- Vineyard Precinct, Hawkesbury Local Government Area: Vineyard is some 500 hectares and is bounded by Commercial Road to the north, Boundary Road to the east and Windsor Road to the south.

AHMS understands that the Department of Planning & Environment proposes to re-zone the areas, and that the results of the ACHA will assist with the precinct planning process.

Enclosed is the proposed methodology for the Aboriginal Cultural Heritage Assessment which includes an archaeological survey. I would like to invite you to review the methodology and provide comment. Can you please provide any comments you may have by **(28 May 2014)**.

Thanks again for registering your interest and participation in this project. I look forward to receiving your response to the proposed methodology. If you have any questions, please do not hesitate to contact me on (02) 9555 4000.

Yours sincerely,

Alan Williams MAACAI

Manager NSW - Aboriginal Heritage

Background

The subject area comprises the Vineyard and Riverstone East Precincts. AHMS understands that the Department of Planning & Environment proposes to re-zone the subject area to allow for future urban development. THE ACHA will assist in this process by identifying archaeologically and culturally sensitive areas within the growth precincts.

AHMS will be undertaking the assessment in accordance with the relevant OEH (now part of NSW Department of Planning and Environment) guidelines. An important part of the assessment will be Aboriginal community consultation that aims to identify cultural values and places of importance to the Aboriginal community within the subject area.

A review of the AHIMS database has indicated that there are:

- 4 registered sites within the Vineyard Precinct;
- 9 registered sites within the Riverstone East Precinct.

As the proposed works may have the potential to impact on Aboriginal cultural heritage in the future, the Department of Planning & Environment have engaged AHMS, to undertake an Aboriginal Cultural Heritage Assessment (ACHA) of the study area in accordance with OEH guidelines. The ACHA will assess the potential impact of any proposed future development, and will provide the necessary documentation to apply for an Aboriginal Heritage Impact Permit (AHIP), or Permits, should one be required.

Proposed Assessment Methodology

AHMS proposes to develop an ACHA in accordance with the latest OEH guidelines for the proposed development, being:

- *Guide to Investigating, Assessing and Reporting on Aboriginal Cultural Heritage in NSW* (OEH 2011);
- *Code of Practice for Archaeological Investigation of Aboriginal Objects in New South Wales* (DECCW 2010); and
- *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW 2010).

Development of the ACHA will include the following tasks:

- Aboriginal community consultation;
- Archaeological survey (further detail is provided below). This component would be undertaken in conjunction with representatives of the Registered Aboriginal Parties (RAPs) based on selective commercial engagements determined by the client;
- Preparation of the ACHA, which incorporates Aboriginal consultation and any cultural information provided, outlines the findings of the archaeological survey, assesses potential impacts to Aboriginal heritage, and makes recommendations on any Aboriginal heritage sites and/or objects that may be present within the proposed subject area;
- If required, prepare an application for an Aboriginal Heritage Impact Permit (AHIP) or Permits to allow the proposed activity and/or additional mitigation measures to be conducted;
- If sites are identified, submit Site Cards and Site Impact Recording Forms to OEH; and
- If required, develop a Care and Control agreement for recovered artefacts and/or submit a site update card to OEH upon reburial of artefacts.

Archaeological Survey Methodology

We propose to undertake an archaeological survey of the subject area utilising a stratified sampling methodology. Methods will follow the *Code of Practice for Archaeological Investigation of Aboriginal Objects in NSW (2010)* and aim to identify any visible Aboriginal objects (material traces and evidence of Aboriginal land); as well as identify those areas where it can be inferred that, although not visible, material traces or evidence of Aboriginal land use have a likelihood of being present under the ground surface (potential archaeological deposits).

The survey strategy will utilise the following requirements of the Code and include:

1. Inspection of a sample of the landforms that will potentially be impacted;
2. Place a proportional emphasis on those landforms deemed to have archaeological potential;
3. Re-inspection of the GPS location of any previously recorded Aboriginal sites, in order to provide information on their current extent and significance;
4. Pedestrian survey of pre-determined transects;
5. Taking representative photographs of survey units and landforms where informative;

6. Recording landform and general soil information for each survey unit;
7. Recording the land surface and vegetation conditions encountered during the survey, accounting as appropriate for things like vegetation, rock outcrops, coarse fragments, etc.) and how these impact on the visibility of objects;
8. Recording any Aboriginal objects observed during the survey; and
9. Recording of spatial information suitable for mapping according to Code requirements and the calculation of survey coverage.

The archaeological survey is designed to sample the precincts in a systematic manner by targeting areas of ground surface visibility and including a representative sample of all landforms. Any areas of ground exposure will be examined for archaeological evidence such as stone artefacts, charcoal and shell. Ground surfaces and cut and fill features will also be examined to determine the degree of soil disturbance, erosion and potential for subsurface archaeological deposits.

The Archaeological survey will involve a five stage approach:

Stage 1 – In conjunction with the proponent, AHMS will seek contact with the landowners to arrange a date for the archaeological survey of each property to be conducted. AHMS will also seek advice from the landowners on access issues and discuss any stipulated requirements.

Stage 2 - An analysis of topographic maps and aerial photographs will be undertaken prior to the survey to identify landforms across the subject area and to identify areas of ground surface exposure in the form of tracks, unsealed roads, dams, cuttings and areas of ground exposure. Those properties that meet these requirements will then be targeted during the survey because they provide an opportunity to identify surface artefact scatters and to investigate exposed soil profiles. Properties that have been subject to extensive ground disturbance will be neglected in favour of undisturbed properties with high ground surface visibility in order to maximise the chance of identifying surface sites and potential archaeological deposits. The properties selected for survey will also reflect the range of landforms present within the subject areas.

Stage 3 - The first step when entering each property is to familiarize ourselves with the landscape and target areas of ground surface visibility.

Stage 4 - Following the initial scoping work, ground inspection will be conducted on foot in survey transects. Areas of ground surface visibility will be surveyed in their entirety. We propose to traverse approximately 70km in survey transects across both precincts.

Stage 5 – Any surface artefact scatters found during the survey will be recorded in detail using a pro-forma developed for field recording. The location and extent of each surface site would be recorded with a GPS. Field notes will be made and photographs taken to document landscape configuration, soil profiles, soil disturbance, ground visibility and vegetation types. Previously recorded sites will also be assessed in order to provide information on their current extent and significance.

The *OEH Due Diligence Code of Practice for the Protection of Aboriginal Objects* in New South Wales requires that when a desktop assessment and archaeological survey confirm the presence or likelihood of Aboriginal objects that will be harmed by a proposed development, further investigation is required.

However, if the results of the desktop research and archaeological survey indicate that there is a low likelihood for sub-surface Aboriginal objects with potential conservation value to be present within the study area and high levels of past disturbance have most likely removed or disturbed any Aboriginal sites or objects, then further archaeological investigation (in the form

of sub-surface testing) should not be considered warranted prior to the proponent undertaking an Aboriginal Heritage Impact Permit (AHIP).

Aboriginal Consultation

AHMS has recently begun the formal consultation process in accordance with OEH's *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW, 2010). The project currently has the following Registered Aboriginal Parties (RAPs):

- Deerubbin LALC;
- Darug Aboriginal Cultural Heritage Assessments;
- Darug Custodian Aboriginal Corporation;
- Darug Land Observations;
- Tocomwall;
- Phil Kahn;
- Tony Williams;
- Shane Williams;
- Darren Williams; and
- Andrew Williams.

Please note that unless otherwise advised, we are required to send details of all RAPs to OEH and Local Aboriginal Land Council as part of the consultation procedure.

Timeframes

AHMS proposes the following indicative timeframes for the project:

- Distribution of this document to the RAPs: 1 May 2014.
- End of review period for the proposed methodology: 28 May 2014.
- Field Survey: eight days to be undertaken in early June 2014.
- Review period of draft report: early July 2014.

Information Sought

AHMS would appreciate your review of the above methodology proposed for the investigation and assessment of the project.

In returning your answers, please include the following where appropriate:

- Any protocols that you would like adopted during the project;

ARCHAEOLOGICAL & HERITAGE MANAGEMENT SOLUTIONS

- Identification of any Aboriginal objects of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Identification of any places of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Guidance on the protocols, sensitivity, use and/or distribution of any cultural information that you provide AHMS;
- Whether you require any further information prior to AHMS proceeding with the project; and
- Any initial thoughts on the potential long term storage and/or management of the Aboriginal objects that may be recovered from the test excavations if they ensue.

Please ensure AHMS is also provided with your nominated individual's contact information including phone number, fax number, postal address and e-mail address (if available).

If you wish to be considered for participation in any fieldwork, please also provide information on the following:

- Current certificates of currency for relevant insurances;
- Information on hourly or daily rates;
- Information that may demonstrate experience in archaeological survey/excavation;
- An assurance that any proposed staff are 'fit for work' to undertake the physical labour of archaeological survey/excavation.
- An assurance that any proposed site staff are endorsed by a relevant section of the Aboriginal community and are able to confer and/or report back to them on project outcomes.

We also direct you to AHMS' policy and procedures on Aboriginal engagement, which will be provided with this document.

It is important that you understand that AHMS will compile and forward information for review by the proponent, but we do not decide who will be involved in any paid capacity.

If you like to arrange for any elders or other community members to be able to visit the site during the work, please let us know.

Riverstone East and Vineyard Precincts: Project Information and Proposed Aboriginal Cultural Heritage Assessment Methodology

Dear Shane,

Thank you for your registration of interest in the Aboriginal Cultural Heritage Assessment for the Riverstone East and Vineyard Growth Centre Precincts (**Figure 1**). Your interest in the project has been formally registered in accordance with the *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010*.

The subject areas comprise:

- Riverstone East Precinct, Blacktown Local Government Area: Riverstone East is some 650 hectares, and is bounded by Schofields Road to the south, Windsor Road to the north east and First Ponds creek to the west;
- Vineyard Precinct, Hawkesbury Local Government Area: Vineyard is some 500 hectares and is bounded by Commercial Road to the north, Boundary Road to the east and Windsor Road to the south.

AHMS understands that the Department of Planning & Environment proposes to re-zone the areas, and that the results of the ACHA will assist with the precinct planning process.

Enclosed is the proposed methodology for the Aboriginal Cultural Heritage Assessment which includes an archaeological survey. I would like to invite you to review the methodology and provide comment. Can you please provide any comments you may have by (**28 May 2014**).

Thanks again for registering your interest and participation in this project. I look forward to receiving your response to the proposed methodology. If you have any questions, please do not hesitate to contact me on (02) 9555 4000.

Yours sincerely,

Alan Williams MAACA

Manager NSW - Aboriginal Heritage

Contact Details

This letter has been prepared by Archaeological & Heritage Management Solutions Pty Ltd (AHMS) for the proponent, Department of Planning & Environment:

Table 1 - Contact Details

Background

The subject area comprises the Vineyard and Riverstone East Precincts. AHMS understands that the Department of Planning & Environment proposes to re-zone the subject area to allow for future urban development. THE ACHA will assist in this process by identifying archaeologically and culturally sensitive areas within the growth precincts.

AHMS will be undertaking the assessment in accordance with the relevant OEH (now part of NSW Department of Planning and Environment) guidelines. An important part of the assessment will be Aboriginal community consultation that aims to identify cultural values and places of importance to the Aboriginal community within the subject area.

A review of the AHIMS database has indicated that there are:

- 4 registered sites within the Vineyard Precinct;
- 9 registered sites within the Riverstone East Precinct.

As the proposed works may have the potential to impact on Aboriginal cultural heritage in the future, the Department of Planning & Environment have engaged AHMS, to undertake an Aboriginal Cultural Heritage Assessment (ACHA) of the study area in accordance with OEH guidelines. The ACHA will assess the potential impact of any proposed future development, and will provide the necessary documentation to apply for an Aboriginal Heritage Impact Permit (AHIP), or Permits, should one be required.

Proposed Assessment Methodology

AHMS proposes to develop an ACHA in accordance with the latest OEH guidelines for the proposed development, being:

- *Guide to Investigating, Assessing and Reporting on Aboriginal Cultural Heritage in NSW* (OEH 2011);
- *Code of Practice for Archaeological Investigation of Aboriginal Objects in New South Wales* (DECCW 2010); and
- *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW 2010).

Development of the ACHA will include the following tasks:

- Aboriginal community consultation;
- Archaeological survey (further detail is provided below). This component would be undertaken in conjunction with representatives of the Registered Aboriginal Parties (RAPs) based on selective commercial engagements determined by the client;
- Preparation of the ACHA, which incorporates Aboriginal consultation and any cultural information provided, outlines the findings of the archaeological survey, assesses potential impacts to Aboriginal heritage, and makes recommendations on any Aboriginal heritage sites and/or objects that may be present within the proposed subject area;
- If required, prepare an application for an Aboriginal Heritage Impact Permit (AHIP) or Permits to allow the proposed activity and/or additional mitigation measures to be conducted;
- If sites are identified, submit Site Cards and Site Impact Recording Forms to OEH; and
- If required, develop a Care and Control agreement for recovered artefacts and/or submit a site update card to OEH upon reburial of artefacts.

Archaeological Survey Methodology

We propose to undertake an archaeological survey of the subject area utilising a stratified sampling methodology. Methods will follow the *Code of Practice for Archaeological Investigation of Aboriginal Objects in NSW (2010)* and aim to identify any visible Aboriginal objects (material traces and evidence of Aboriginal land); as well as identify those areas where it can be inferred that, although not visible, material traces or evidence of Aboriginal land use have a likelihood of being present under the ground surface (potential archaeological deposits).

The survey strategy will utilise the following requirements of the Code and include:

1. Inspection of a sample of the landforms that will potentially be impacted;
2. Place a proportional emphasis on those landforms deemed to have archaeological potential;
3. Re-inspection of the GPS location of any previously recorded Aboriginal sites, in order to provide information on their current extent and significance;
4. Pedestrian survey of pre-determined transects;
5. Taking representative photographs of survey units and landforms where informative;

6. Recording landform and general soil information for each survey unit;
7. Recording the land surface and vegetation conditions encountered during the survey, accounting as appropriate for things like vegetation, rock outcrops, coarse fragments, etc.) and how these impact on the visibility of objects;
8. Recording any Aboriginal objects observed during the survey; and
9. Recording of spatial information suitable for mapping according to Code requirements and the calculation of survey coverage.

The archaeological survey is designed to sample the precincts in a systematic manner by targeting areas of ground surface visibility and including a representative sample of all landforms. Any areas of ground exposure will be examined for archaeological evidence such as stone artefacts, charcoal and shell. Ground surfaces and cut and fill features will also be examined to determine the degree of soil disturbance, erosion and potential for subsurface archaeological deposits.

The Archaeological survey will involve a five stage approach:

Stage 1 – In conjunction with the proponent, AHMS will seek contact with the landowners to arrange a date for the archaeological survey of each property to be conducted. AHMS will also seek advice from the landowners on access issues and discuss any stipulated requirements.

Stage 2 - An analysis of topographic maps and aerial photographs will be undertaken prior to the survey to identify landforms across the subject area and to identify areas of ground surface exposure in the form of tracks, unsealed roads, dams, cuttings and areas of ground exposure. Those properties that meet these requirements will then be targeted during the survey because they provide an opportunity to identify surface artefact scatters and to investigate exposed soil profiles. Properties that have been subject to extensive ground disturbance will be neglected in favour of undisturbed properties with high ground surface visibility in order to maximise the chance of identifying surface sites and potential archaeological deposits. The properties selected for survey will also reflect the range of landforms present within the subject areas.

Stage 3 - The first step when entering each property is to familiarize ourselves with the landscape and target areas of ground surface visibility.

Stage 4 - Following the initial scoping work, ground inspection will be conducted on foot in survey transects. Areas of ground surface visibility will be surveyed in their entirety. We propose to traverse approximately 70km in survey transects across both precincts.

Stage 5 – Any surface artefact scatters found during the survey will be recorded in detail using a pro-forma developed for field recording. The location and extent of each surface site would be recorded with a GPS. Field notes will be made and photographs taken to document landscape configuration, soil profiles, soil disturbance, ground visibility and vegetation types. Previously recorded sites will also be assessed in order to provide information on their current extent and significance.

The *OEH Due Diligence Code of Practice for the Protection of Aboriginal Objects* in New South Wales requires that when a desktop assessment and archaeological survey confirm the presence or likelihood of Aboriginal objects that will be harmed by a proposed development, further investigation is required.

However, if the results of the desktop research and archaeological survey indicate that there is a low likelihood for sub-surface Aboriginal objects with potential conservation value to be present within the study area and high levels of past disturbance have most likely removed or disturbed any Aboriginal sites or objects, then further archaeological investigation (in the form

of sub-surface testing) should not be considered warranted prior to the proponent undertaking an Aboriginal Heritage Impact Permit (AHIP).

Aboriginal Consultation

AHMS has recently begun the formal consultation process in accordance with OEH's *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW, 2010). The project currently has the following Registered Aboriginal Parties (RAPs):

- Deerubbin LALC;
- Darug Aboriginal Cultural Heritage Assessments;
- Darug Custodian Aboriginal Corporation;
- Darug Land Observations;
- Tocomwall;
- Phil Kahn;
- Tony Williams;
- Shane Williams;
- Darren Williams; and
- Andrew Williams.

Please note that unless otherwise advised, we are required to send details of all RAPs to OEH and Local Aboriginal Land Council as part of the consultation procedure.

Timeframes

AHMS proposes the following indicative timeframes for the project:

- Distribution of this document to the RAPs: 1 May 2014.
- End of review period for the proposed methodology: 28 May 2014.
- Field Survey: eight days to be undertaken in early June 2014.
- Review period of draft report: early July 2014.

Information Sought

AHMS would appreciate your review of the above methodology proposed for the investigation and assessment of the project.

In returning your answers, please include the following where appropriate:

- Any protocols that you would like adopted during the project;

ARCHAEOLOGICAL & HERITAGE MANAGEMENT SOLUTIONS

- Identification of any Aboriginal objects of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Identification of any places of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Guidance on the protocols, sensitivity, use and/or distribution of any cultural information that you provide AHMS;
- Whether you require any further information prior to AHMS proceeding with the project; and
- Any initial thoughts on the potential long term storage and/or management of the Aboriginal objects that may be recovered from the test excavations if they ensue.

Please ensure AHMS is also provided with your nominated individual's contact information including phone number, fax number, postal address and e-mail address (if available).

If you wish to be considered for participation in any fieldwork, please also provide information on the following:

- Current certificates of currency for relevant insurances;
- Information on hourly or daily rates;
- Information that may demonstrate experience in archaeological survey/excavation;
- An assurance that any proposed staff are 'fit for work' to undertake the physical labour of archaeological survey/excavation.
- An assurance that any proposed site staff are endorsed by a relevant section of the Aboriginal community and are able to confer and/or report back to them on project outcomes.

We also direct you to AHMS' policy and procedures on Aboriginal engagement, which will be provided with this document.

It is important that you understand that AHMS will compile and forward information for review by the proponent, but we do not decide who will be involved in any paid capacity.

If you like to arrange for any elders or other community members to be able to visit the site during the work, please let us know.

Riverstone East and Vineyard Precincts: Project Information and Proposed Aboriginal Cultural Heritage Assessment Methodology

Dear Andrew,

Thank you for your registration of interest in the Aboriginal Cultural Heritage Assessment for the Riverstone East and Vineyard Growth Centre Precincts (**Figure 1**). Your interest in the project has been formally registered in accordance with the *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010*.

The subject areas comprise:

- Riverstone East Precinct, Blacktown Local Government Area: Riverstone East is some 650 hectares, and is bounded by Schofields Road to the south, Windsor Road to the north east and First Ponds creek to the west;
- Vineyard Precinct, Hawkesbury Local Government Area: Vineyard is some 500 hectares and is bounded by Commercial Road to the north, Boundary Road to the east and Windsor Road to the south.

AHMS understands that the Department of Planning & Environment proposes to re-zone the areas, and that the results of the ACHA will assist with the precinct planning process.

Enclosed is the proposed methodology for the Aboriginal Cultural Heritage Assessment which includes an archaeological survey. I would like to invite you to review the methodology and provide comment. Can you please provide any comments you may have by **(28 May 2014)**.

Thanks again for registering your interest and participation in this project. I look forward to receiving your response to the proposed methodology. If you have any questions, please do not hesitate to contact me on (02) 9555 4000.

Yours sincerely,

Alan Williams MAACA

Manager NSW - Aboriginal Heritage

Contact Details

This letter has been prepared by Archaeological & Heritage Management Solutions Pty Ltd (AHMS) for the proponent, Department of Planning & Environment:

Table 1 - Contact Details

	F. 02 9555 7005
E: evelyn.ivanon@planning.nsw.gov.au	E: awilliams@ahms.com.au

Background

The subject area comprises the Vineyard and Riverstone East Precincts. AHMS understands that the Department of Planning & Environment proposes to re-zone the subject area to allow for future urban development. THE ACHA will assist in this process by identifying archaeologically and culturally sensitive areas within the growth precincts.

AHMS will be undertaking the assessment in accordance with the relevant OEH (now part of NSW Department of Planning and Environment) guidelines. An important part of the assessment will be Aboriginal community consultation that aims to identify cultural values and places of importance to the Aboriginal community within the subject area.

A review of the AHIMS database has indicated that there are:

- 4 registered sites within the Vineyard Precinct;
- 9 registered sites within the Riverstone East Precinct.

As the proposed works may have the potential to impact on Aboriginal cultural heritage in the future, the Department of Planning & Environment have engaged AHMS, to undertake an Aboriginal Cultural Heritage Assessment (ACHA) of the study area in accordance with OEH guidelines. The ACHA will assess the potential impact of any proposed future development, and will provide the necessary documentation to apply for an Aboriginal Heritage Impact Permit (AHIP), or Permits, should one be required.

Proposed Assessment Methodology

AHMS proposes to develop an ACHA in accordance with the latest OEH guidelines for the proposed development, being:

- *Guide to Investigating, Assessing and Reporting on Aboriginal Cultural Heritage in NSW* (OEH 2011);
- *Code of Practice for Archaeological Investigation of Aboriginal Objects in New South Wales* (DECCW 2010); and
- *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW 2010).

Development of the ACHA will include the following tasks:

- Aboriginal community consultation;
- Archaeological survey (further detail is provided below). This component would be undertaken in conjunction with representatives of the Registered Aboriginal Parties (RAPs) based on selective commercial engagements determined by the client;
- Preparation of the ACHA, which incorporates Aboriginal consultation and any cultural information provided, outlines the findings of the archaeological survey, assesses potential impacts to Aboriginal heritage, and makes recommendations on any Aboriginal heritage sites and/or objects that may be present within the proposed subject area;
- If required, prepare an application for an Aboriginal Heritage Impact Permit (AHIP) or Permits to allow the proposed activity and/or additional mitigation measures to be conducted;
- If sites are identified, submit Site Cards and Site Impact Recording Forms to OEH; and
- If required, develop a Care and Control agreement for recovered artefacts and/or submit a site update card to OEH upon reburial of artefacts.

Archaeological Survey Methodology

We propose to undertake an archaeological survey of the subject area utilising a stratified sampling methodology. Methods will follow the *Code of Practice for Archaeological Investigation of Aboriginal Objects in NSW (2010)* and aim to identify any visible Aboriginal objects (material traces and evidence of Aboriginal land); as well as identify those areas where it can be inferred that, although not visible, material traces or evidence of Aboriginal land use have a likelihood of being present under the ground surface (potential archaeological deposits).

The survey strategy will utilise the following requirements of the Code and include:

1. Inspection of a sample of the landforms that will potentially be impacted;
2. Place a proportional emphasis on those landforms deemed to have archaeological potential;
3. Re-inspection of the GPS location of any previously recorded Aboriginal sites, in order to provide information on their current extent and significance;
4. Pedestrian survey of pre-determined transects;
5. Taking representative photographs of survey units and landforms where informative;

6. Recording landform and general soil information for each survey unit;
7. Recording the land surface and vegetation conditions encountered during the survey, accounting as appropriate for things like vegetation, rock outcrops, coarse fragments, etc.) and how these impact on the visibility of objects;
8. Recording any Aboriginal objects observed during the survey; and
9. Recording of spatial information suitable for mapping according to Code requirements and the calculation of survey coverage.

The archaeological survey is designed to sample the precincts in a systematic manner by targeting areas of ground surface visibility and including a representative sample of all landforms. Any areas of ground exposure will be examined for archaeological evidence such as stone artefacts, charcoal and shell. Ground surfaces and cut and fill features will also be examined to determine the degree of soil disturbance, erosion and potential for subsurface archaeological deposits.

The Archaeological survey will involve a five stage approach:

Stage 1 – In conjunction with the proponent, AHMS will seek contact with the landowners to arrange a date for the archaeological survey of each property to be conducted. AHMS will also seek advice from the landowners on access issues and discuss any stipulated requirements.

Stage 2 - An analysis of topographic maps and aerial photographs will be undertaken prior to the survey to identify landforms across the subject area and to identify areas of ground surface exposure in the form of tracks, unsealed roads, dams, cuttings and areas of ground exposure. Those properties that meet these requirements will then be targeted during the survey because they provide an opportunity to identify surface artefact scatters and to investigate exposed soil profiles. Properties that have been subject to extensive ground disturbance will be neglected in favour of undisturbed properties with high ground surface visibility in order to maximise the chance of identifying surface sites and potential archaeological deposits. The properties selected for survey will also reflect the range of landforms present within the subject areas.

Stage 3 - The first step when entering each property is to familiarize ourselves with the landscape and target areas of ground surface visibility.

Stage 4 - Following the initial scoping work, ground inspection will be conducted on foot in survey transects. Areas of ground surface visibility will be surveyed in their entirety. We propose to traverse approximately 70km in survey transects across both precincts.

Stage 5 – Any surface artefact scatters found during the survey will be recorded in detail using a pro-forma developed for field recording. The location and extent of each surface site would be recorded with a GPS. Field notes will be made and photographs taken to document landscape configuration, soil profiles, soil disturbance, ground visibility and vegetation types. Previously recorded sites will also be assessed in order to provide information on their current extent and significance.

The *OEH Due Diligence Code of Practice for the Protection of Aboriginal Objects* in New South Wales requires that when a desktop assessment and archaeological survey confirm the presence or likelihood of Aboriginal objects that will be harmed by a proposed development, further investigation is required.

However, if the results of the desktop research and archaeological survey indicate that there is a low likelihood for sub-surface Aboriginal objects with potential conservation value to be present within the study area and high levels of past disturbance have most likely removed or disturbed any Aboriginal sites or objects, then further archaeological investigation (in the form

of sub-surface testing) should not be considered warranted prior to the proponent undertaking an Aboriginal Heritage Impact Permit (AHIP).

Aboriginal Consultation

AHMS has recently begun the formal consultation process in accordance with OEH's *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW, 2010). The project currently has the following Registered Aboriginal Parties (RAPs):

- Deerubbin LALC;
- Darug Aboriginal Cultural Heritage Assessments;
- Darug Custodian Aboriginal Corporation;
- Darug Land Observations;
- Tocomwall;
- Phil Kahn;
- Tony Williams;
- Shane Williams;
- Darren Williams; and
- Andrew Williams.

Please note that unless otherwise advised, we are required to send details of all RAPs to OEH and Local Aboriginal Land Council as part of the consultation procedure.

Timeframes

AHMS proposes the following indicative timeframes for the project:

- Distribution of this document to the RAPs: 1 May 2014.
- End of review period for the proposed methodology: 28 May 2014.
- Field Survey: eight days to be undertaken in early June 2014.
- Review period of draft report: early July 2014.

Information Sought

AHMS would appreciate your review of the above methodology proposed for the investigation and assessment of the project.

In returning your answers, please include the following where appropriate:

- Any protocols that you would like adopted during the project;

ARCHAEOLOGICAL & HERITAGE MANAGEMENT SOLUTIONS

- Identification of any Aboriginal objects of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Identification of any places of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Guidance on the protocols, sensitivity, use and/or distribution of any cultural information that you provide AHMS;
- Whether you require any further information prior to AHMS proceeding with the project; and
- Any initial thoughts on the potential long term storage and/or management of the Aboriginal objects that may be recovered from the test excavations if they ensue.

Please ensure AHMS is also provided with your nominated individual's contact information including phone number, fax number, postal address and e-mail address (if available).

If you wish to be considered for participation in any fieldwork, please also provide information on the following:

- Current certificates of currency for relevant insurances;
- Information on hourly or daily rates;
- Information that may demonstrate experience in archaeological survey/excavation;
- An assurance that any proposed staff are 'fit for work' to undertake the physical labour of archaeological survey/excavation.
- An assurance that any proposed site staff are endorsed by a relevant section of the Aboriginal community and are able to confer and/or report back to them on project outcomes.

We also direct you to AHMS' policy and procedures on Aboriginal engagement, which will be provided with this document.

It is important that you understand that AHMS will compile and forward information for review by the proponent, but we do not decide who will be involved in any paid capacity.

If you like to arrange for any elders or other community members to be able to visit the site during the work, please let us know.

Riverstone East and Vineyard Precincts: Project Information and Proposed Aboriginal Cultural Heritage Assessment Methodology

Dear Darren,

Thank you for your registration of interest in the Aboriginal Cultural Heritage Assessment for the Riverstone East and Vineyard Growth Centre Precincts (**Figure 1**). Your interest in the project has been formally registered in accordance with the *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010*.

The subject areas comprise:

- Riverstone East Precinct, Blacktown Local Government Area: Riverstone East is some 650 hectares, and is bounded by Schofields Road to the south, Windsor Road to the north east and First Ponds creek to the west;
- Vineyard Precinct, Hawkesbury Local Government Area: Vineyard is some 500 hectares and is bounded by Commercial Road to the north, Boundary Road to the east and Windsor Road to the south.

AHMS understands that the Department of Planning & Environment proposes to re-zone the areas, and that the results of the ACHA will assist with the precinct planning process.

Enclosed is the proposed methodology for the Aboriginal Cultural Heritage Assessment which includes an archaeological survey. I would like to invite you to review the methodology and provide comment. Can you please provide any comments you may have by **(28 May 2014)**.

Thanks again for registering your interest and participation in this project. I look forward to receiving your response to the proposed methodology. If you have any questions, please do not hesitate to contact me on (02) 9555 4000.

Yours sincerely,

Alan Williams MAACA

Manager NSW - Aboriginal Heritage

Background

The subject area comprises the Vineyard and Riverstone East Precincts. AHMS understands that the Department of Planning & Environment proposes to re-zone the subject area to allow for future urban development. THE ACHA will assist in this process by identifying archaeologically and culturally sensitive areas within the growth precincts.

AHMS will be undertaking the assessment in accordance with the relevant OEH (now part of NSW Department of Planning and Environment) guidelines. An important part of the assessment will be Aboriginal community consultation that aims to identify cultural values and places of importance to the Aboriginal community within the subject area.

A review of the AHIMS database has indicated that there are:

- 4 registered sites within the Vineyard Precinct;
- 9 registered sites within the Riverstone East Precinct.

As the proposed works may have the potential to impact on Aboriginal cultural heritage in the future, the Department of Planning & Environment have engaged AHMS, to undertake an Aboriginal Cultural Heritage Assessment (ACHA) of the study area in accordance with OEH guidelines. The ACHA will assess the potential impact of any proposed future development, and will provide the necessary documentation to apply for an Aboriginal Heritage Impact Permit (AHIP), or Permits, should one be required.

Proposed Assessment Methodology

AHMS proposes to develop an ACHA in accordance with the latest OEH guidelines for the proposed development, being:

- *Guide to Investigating, Assessing and Reporting on Aboriginal Cultural Heritage in NSW* (OEH 2011);
- *Code of Practice for Archaeological Investigation of Aboriginal Objects in New South Wales* (DECCW 2010); and
- *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW 2010).

Development of the ACHA will include the following tasks:

- Aboriginal community consultation;
- Archaeological survey (further detail is provided below). This component would be undertaken in conjunction with representatives of the Registered Aboriginal Parties (RAPs) based on selective commercial engagements determined by the client;
- Preparation of the ACHA, which incorporates Aboriginal consultation and any cultural information provided, outlines the findings of the archaeological survey, assesses potential impacts to Aboriginal heritage, and makes recommendations on any Aboriginal heritage sites and/or objects that may be present within the proposed subject area;
- If required, prepare an application for an Aboriginal Heritage Impact Permit (AHIP) or Permits to allow the proposed activity and/or additional mitigation measures to be conducted;
- If sites are identified, submit Site Cards and Site Impact Recording Forms to OEH; and
- If required, develop a Care and Control agreement for recovered artefacts and/or submit a site update card to OEH upon reburial of artefacts.

Archaeological Survey Methodology

We propose to undertake an archaeological survey of the subject area utilising a stratified sampling methodology. Methods will follow the *Code of Practice for Archaeological Investigation of Aboriginal Objects in NSW (2010)* and aim to identify any visible Aboriginal objects (material traces and evidence of Aboriginal land); as well as identify those areas where it can be inferred that, although not visible, material traces or evidence of Aboriginal land use have a likelihood of being present under the ground surface (potential archaeological deposits).

The survey strategy will utilise the following requirements of the Code and include:

1. Inspection of a sample of the landforms that will potentially be impacted;
2. Place a proportional emphasis on those landforms deemed to have archaeological potential;
3. Re-inspection of the GPS location of any previously recorded Aboriginal sites, in order to provide information on their current extent and significance;
4. Pedestrian survey of pre-determined transects;
5. Taking representative photographs of survey units and landforms where informative;

6. Recording landform and general soil information for each survey unit;
7. Recording the land surface and vegetation conditions encountered during the survey, accounting as appropriate for things like vegetation, rock outcrops, coarse fragments, etc.) and how these impact on the visibility of objects;
8. Recording any Aboriginal objects observed during the survey; and
9. Recording of spatial information suitable for mapping according to Code requirements and the calculation of survey coverage.

The archaeological survey is designed to sample the precincts in a systematic manner by targeting areas of ground surface visibility and including a representative sample of all landforms. Any areas of ground exposure will be examined for archaeological evidence such as stone artefacts, charcoal and shell. Ground surfaces and cut and fill features will also be examined to determine the degree of soil disturbance, erosion and potential for subsurface archaeological deposits.

The Archaeological survey will involve a five stage approach:

Stage 1 – In conjunction with the proponent, AHMS will seek contact with the landowners to arrange a date for the archaeological survey of each property to be conducted. AHMS will also seek advice from the landowners on access issues and discuss any stipulated requirements.

Stage 2 - An analysis of topographic maps and aerial photographs will be undertaken prior to the survey to identify landforms across the subject area and to identify areas of ground surface exposure in the form of tracks, unsealed roads, dams, cuttings and areas of ground exposure. Those properties that meet these requirements will then be targeted during the survey because they provide an opportunity to identify surface artefact scatters and to investigate exposed soil profiles. Properties that have been subject to extensive ground disturbance will be neglected in favour of undisturbed properties with high ground surface visibility in order to maximise the chance of identifying surface sites and potential archaeological deposits. The properties selected for survey will also reflect the range of landforms present within the subject areas.

Stage 3 - The first step when entering each property is to familiarize ourselves with the landscape and target areas of ground surface visibility.

Stage 4 - Following the initial scoping work, ground inspection will be conducted on foot in survey transects. Areas of ground surface visibility will be surveyed in their entirety. We propose to traverse approximately 70km in survey transects across both precincts.

Stage 5 – Any surface artefact scatters found during the survey will be recorded in detail using a pro-forma developed for field recording. The location and extent of each surface site would be recorded with a GPS. Field notes will be made and photographs taken to document landscape configuration, soil profiles, soil disturbance, ground visibility and vegetation types. Previously recorded sites will also be assessed in order to provide information on their current extent and significance.

The *OEH Due Diligence Code of Practice for the Protection of Aboriginal Objects* in New South Wales requires that when a desktop assessment and archaeological survey confirm the presence or likelihood of Aboriginal objects that will be harmed by a proposed development, further investigation is required.

However, if the results of the desktop research and archaeological survey indicate that there is a low likelihood for sub-surface Aboriginal objects with potential conservation value to be present within the study area and high levels of past disturbance have most likely removed or disturbed any Aboriginal sites or objects, then further archaeological investigation (in the form

of sub-surface testing) should not be considered warranted prior to the proponent undertaking an Aboriginal Heritage Impact Permit (AHIP).

Aboriginal Consultation

AHMS has recently begun the formal consultation process in accordance with OEH's *Aboriginal Cultural Heritage Consultation Requirements for Proponents 2010* (DECCW, 2010). The project currently has the following Registered Aboriginal Parties (RAPs):

- Deerubbin LALC;
- Darug Aboriginal Cultural Heritage Assessments;
- Darug Custodian Aboriginal Corporation;
- Darug Land Observations;
- Tocomwall;
- Phil Kahn;
- Tony Williams;
- Shane Williams;
- Darren Williams; and
- Andrew Williams.

Please note that unless otherwise advised, we are required to send details of all RAPs to OEH and Local Aboriginal Land Council as part of the consultation procedure.

Timeframes

AHMS proposes the following indicative timeframes for the project:

- Distribution of this document to the RAPs: 1 May 2014.
- End of review period for the proposed methodology: 28 May 2014.
- Field Survey: eight days to be undertaken in early June 2014.
- Review period of draft report: early July 2014.

Information Sought

AHMS would appreciate your review of the above methodology proposed for the investigation and assessment of the project.

In returning your answers, please include the following where appropriate:

- Any protocols that you would like adopted during the project;

ARCHAEOLOGICAL & HERITAGE MANAGEMENT SOLUTIONS

- Identification of any Aboriginal objects of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Identification of any places of cultural significance and/or importance that you are aware of within the activity area, and how you wish them to be dealt with during the project;
- Guidance on the protocols, sensitivity, use and/or distribution of any cultural information that you provide AHMS;
- Whether you require any further information prior to AHMS proceeding with the project; and
- Any initial thoughts on the potential long term storage and/or management of the Aboriginal objects that may be recovered from the test excavations if they ensue.

Please ensure AHMS is also provided with your nominated individual's contact information including phone number, fax number, postal address and e-mail address (if available).

If you wish to be considered for participation in any fieldwork, please also provide information on the following:

- Current certificates of currency for relevant insurances;
- Information on hourly or daily rates;
- Information that may demonstrate experience in archaeological survey/excavation;
- An assurance that any proposed staff are 'fit for work' to undertake the physical labour of archaeological survey/excavation.
- An assurance that any proposed site staff are endorsed by a relevant section of the Aboriginal community and are able to confer and/or report back to them on project outcomes.

We also direct you to AHMS' policy and procedures on Aboriginal engagement, which will be provided with this document.

It is important that you understand that AHMS will compile and forward information for review by the proponent, but we do not decide who will be involved in any paid capacity.

If you like to arrange for any elders or other community members to be able to visit the site during the work, please let us know.

Attention:

Alan Williams
AHMS

re Riverstone East and Vineyard Precincts

DACTA have reviewed the attached documents
and we support your objectives. We look forward
to working with you on this project

Yours Sincerely,
C. Everingham

Dear Alan,

I write to you in reference to the Riverstone east and Vineyard growth centre precinct. I would like you to put on record that my family is exercising their rights under sect 211 of the Native title act. My immediate family has lived in the area for since 1897 and my family has not extinguished it connection to country. My family has worked on Archaeological work in the past and is still doing so. I have been involved in Aboriginal affair all my life and like my father before me, who was part of the first 1938 human rights movement in Australia.

I am on a several government's boards and the board of the Returned Services League and I have a degree in Engineering and MBA. In the 1960 with other members of the community and me went on the famous freedom bus ride which resulted in the 1967 referendum. I was in evolved in the land Rights act so I have the credentials to represent the community. I would like to inform you that your company in the past and is still employing none- Aboriginal people (claiming to be Aboriginal people) in your field work which have to seek leave of the federal court of Australia to show proof that they are of Aboriginal decent.

My family is seeing our heritage being destroyed at a fast rate and now are making a stand, I have spoken to my colleges in the NSW government and I have been involved in recommendations in changes to the legislation relating to the Coomallee findings. For too long has the National Parks wildlife service been in control of the legislation so the recommendations are to put in place a local committee to say who carries out our heritage in the area.

Your methodology is sound but I have grave reservation the surveys which have been conducted in the past are inaccurate and need to be reassessed. Over the years the landscape has changed significantly and the flood in the area over the past 60 years have contributed the demographics of the area. I would like you to consider my families in participating in the survey as it is very significant to my family.

If you have any objections to my request as a traditional owner could you please respond to me in writing?

Alan Williams

Dear Andrew

Thank you for registering your interest in AHMS' assessment of the Riverstone East and Vineyard Growth Centre precincts for the Department of Planning and Environment. As required by the Office of Environment & Heritage guidelines, please find attached a document elaborating on the project, and outlining an assessment methodology

for the site investigation of the two areas. Can you please review the documentation, and provide any comments (if you wish) within 28 days.

Towards the end of the comment period, AHMS will begin to discuss the requirements and detail of any fieldwork. AHMS has yet to undertake detailed discussions on this, however if you wish to participate, can you please ensure the questions/information at the end of the attached document are answered/provided to AHMS. Please also note AHMS' policy and procedures provided to the client on this matter.

Happy to discuss further

Thanks
Al

Attention: AHMS

Subject: Vineyard Precinct - Aboriginal Cultural Heritage Assessment

Dear Alan

Our group is a non- profit organisation that has been active for over forty years in Western Sydney, we are a Darug community group with over three hundred members. The main aim in our constitution is the care of Darug sites, places, wildlife and to promote our culture and provide education on the Darug history.

Our groups founding members lived in the Vineyard/ Riverstone area for many years, this is an area that our group has knowledge and connection to. This is a Darug landscape with evidence of continued occupation throughout the landscape. The Darug history and sites in this area have been closed off due to private land tenure for many years, only a small percentage has been previously accessible during development assessments at land holder's discretion.

We have received and reviewed the Aboriginal Cultural Heritage Assessment for the Vineyard Precinct NSW the report is inclusive and the assessment is thorough with a good documentation of findings.

We support the findings and recommendation within this report.

During the assessment our group is concerned with the amount of groups consulted from out of the area and also personal profit groups, this area has traditional owners with knowledge ,all other groups that would like to be consulted should receive documentation but not employment.

Please contact us with all further enquiries on the above contacts.

Regards
